ARKOSLIGHT®

THE NEW HOME OF LIGHT

Arkoslight ha inaugurado sus nuevas instalaciones en Valencia (España), tras un proceso de renovación y ampliación completa de las oficinas centrales de la empresa. Estas nuevas oficinas representan un paso más en el crecimiento y proyección de la firma.

Arkoslight has just inaugurated its new facilities in Valencia (Spain), after a process of complete renovation and expansion of the Company's head offices. These new offices represent a step further in the growth and projection of the firm.

Arkoslight vient d'inaugurer ses nouvelles installations à Valence (Espagne), après un processus de rénovation complète et d'agrandissement du siège de la Société. Ces nouveaux bureaux représentent un pas supplémentaire dans la croissance et la projection de la Société.

Arkoslight ha appena inaugurato le sue nuove strutture a Valencia (Spagna), dopo un processo di completa ristrutturazione e ampliamento della sede della Società. Questi nuovi uffici rappresentano un ulteriore passo avanti nella crescita e nella proiezione dell'azienda.

Arkoslight hat gerade seine neuen Räumlichkeiten in Valencia (Spanien) eröffnet, nachdem der Hauptsitz des Unternehmens komplett renoviert und erweitert wurde. Diese neuen Büros sind ein weiterer Schritt in Richtung Wachstum und Projektion des Unternehmens.

Las nuevas instalaciones son el escenario de un diálogo entre la luz natural y artificial. Una simbiosis perfecta. El patio es el elemento central de la transparencia, tanto transversal como longitudinal, construido en dos niveles, es capaz de captar la luz y nos permite establecer visualmente una comunicación y un diálogo entre los diferentes espacios.

The new facilities are the scenario of a dialogue between natural and artificial light. A perfect symbiosis. The courtyard is the central element of transparency, both transversal and longitudinal, built on two levels, capable of catching the light and allowing us to visually establish a communication and a dialogue between the different spaces.

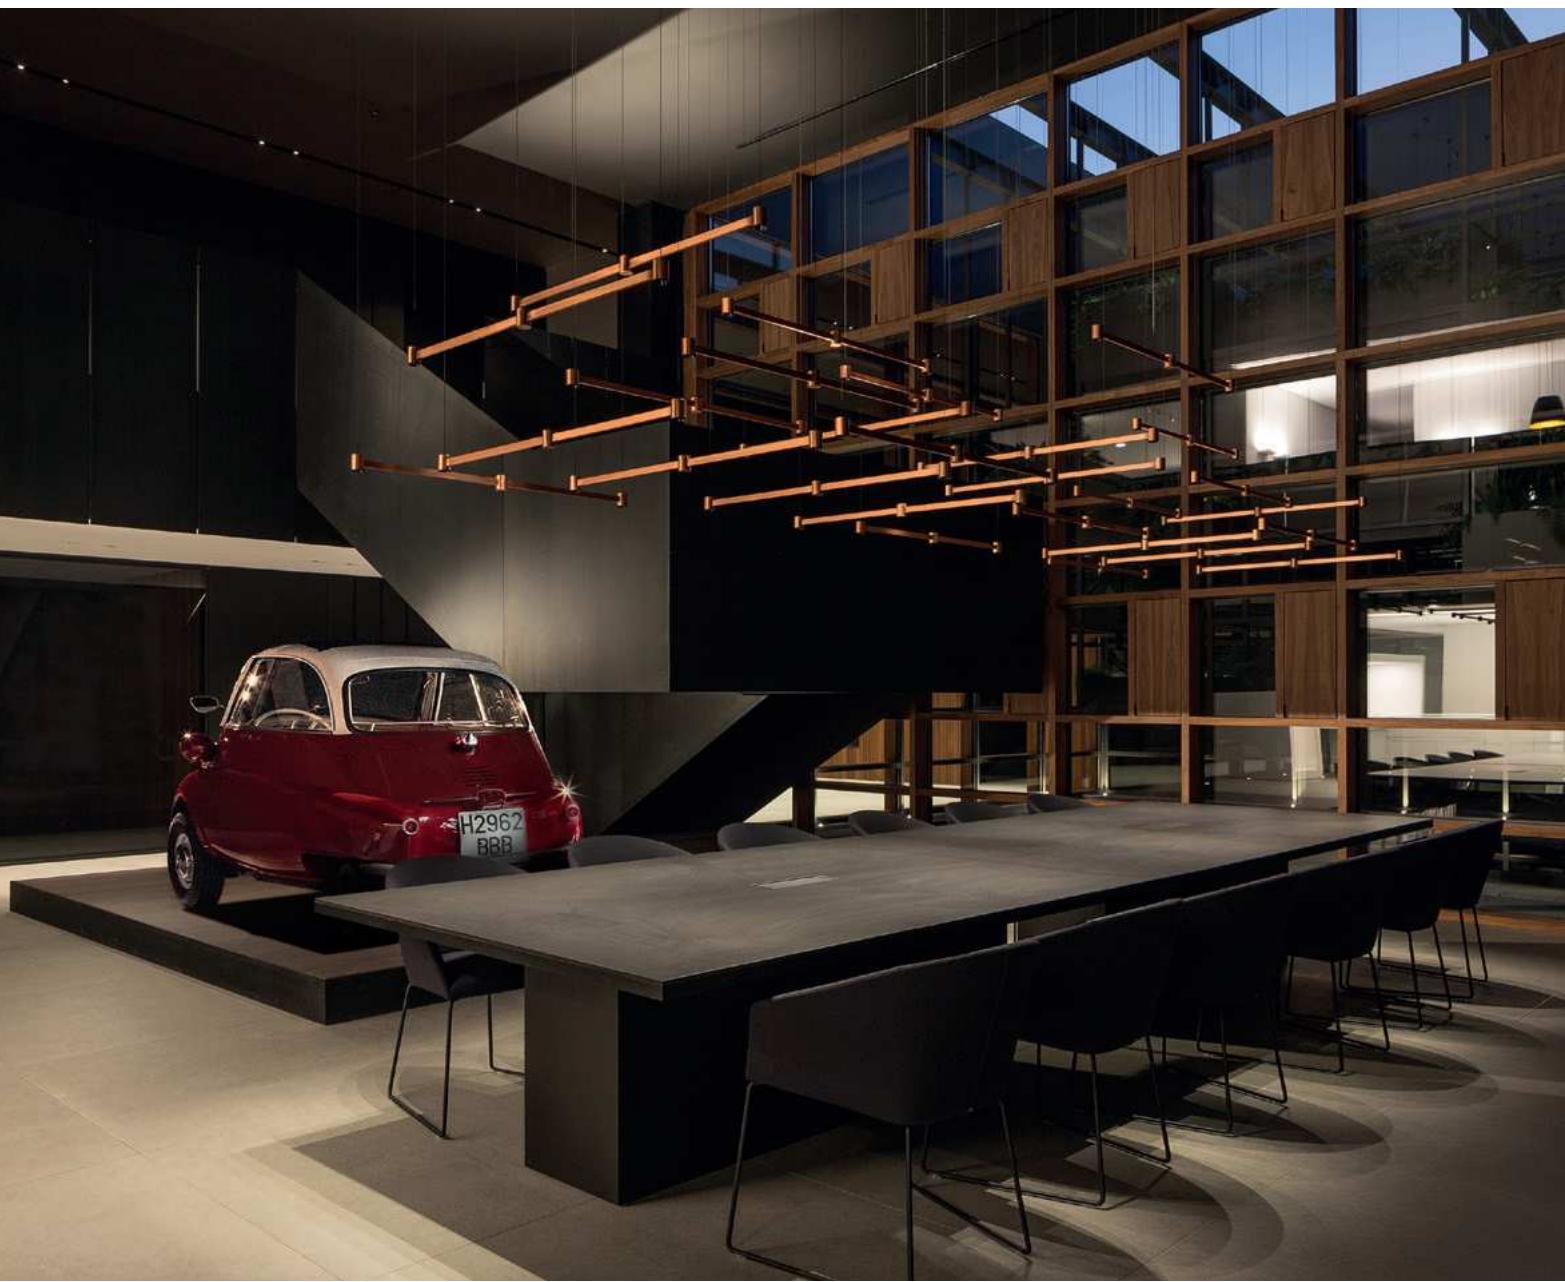

Les nouvelles installations sont le scénario d'un dialogue entre la lumière naturelle et l'artificielle. Une parfaite symbiose. La cour intérieure est l'élément central de la transparence, à la fois transversale

et longitudinale, construite sur deux niveaux, capable d'attraper la lumière et permettant d'établir visuellement une communication et un dialogue entre les différents espaces.

Le nuove strutture sono la scena di un dialogo tra luce naturale e artificiale. Una simbiosi perfetta. Il cortile è l'elemento centrale della trasparenza, sia trasversale che longitudinale, costruita su due livelli, capace di catturare la luce e permetterci di stabilire visivamente comunicazione e dialogo tra i diversi spazi.

Die neuen Installationen sind der Schauplatz eines Dialogs zwischen natürlichem und künstlichem Licht. Eine perfekte Symbiose. Der Innenhof ist das zentrale Element der Transparenz, sowohl quer als auch längs, auf zwei Ebenen, der das Tageslicht einfangen kann und es uns ermöglicht, visuell eine Kommunikation und einen Dialog zwischen den verschiedenen Räumen herzustellen.

Las oficinas tienen en la doble altura un elemento esencial. Se ha diseñado una escalera de chapa de acero teñida en negro para conectar los diferentes niveles del edificio.

The distribution of the offices over two levels is an essential element. A black-tinted steel sheet stairway has been designed in order to connect the different levels of the building.

La distribution sur deux étages des bureaux est un élément essentiel.

Un escalier fabriqué en tôle d'acier teintée noire a été conçu pour relier les différents niveaux du bâtiment.

Gli uffici hanno, nella doppia altezza, un elemento essenziale. Una scala fatta di lamiera di acciaio nero è stata progettata per collegare i diversi livelli dell'edificio.

Die grosszügig gestalteten Galerie hat ein imponierendes Hauptelement. Es wurde eine Treppe aus schwarzem Cortenstahl entworfen, um die verschiedenen Gebäudeebenen miteinander zu verbinden.

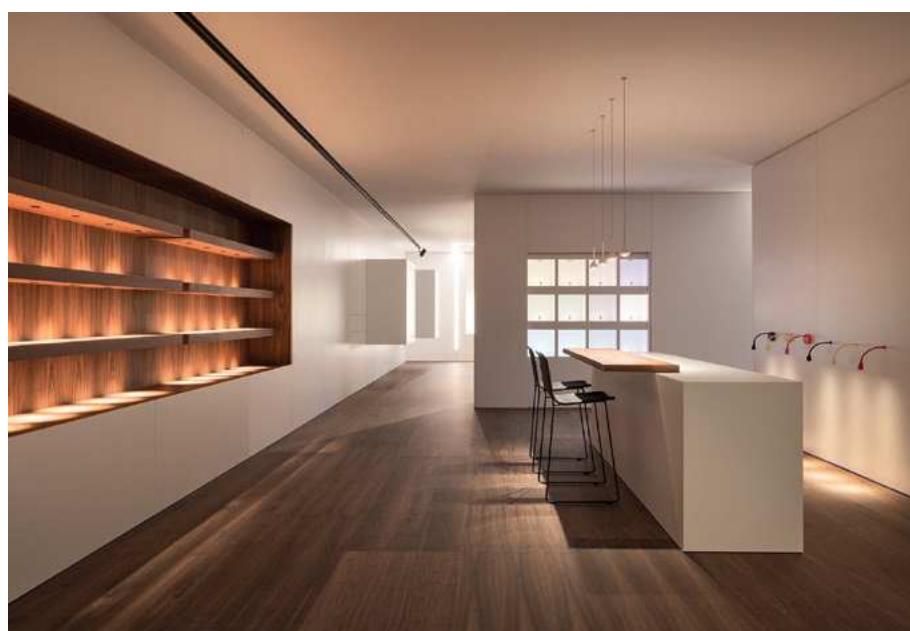

El showroom, también distribuido en dos alturas, recrea pequeños ambientes, intentando comunicar la energía y las cualidades de los productos expuestos. En la planta baja, hay una gran mesa de reuniones y una zona de formación ubicadas de manera periférica, mientras que el nivel superior incluye una “lounge” de sensaciones luminosas y un espacio de networking.

The showroom, also distributed over two heights, recreates small atmospheres, trying to communicate the energy and qualities of the products displayed. On the lower level, there is a large meeting table and training area placed in a peripheral way, whereas the upper level includes a luminous sensations lounge and a networking area.

Le showroom, également distribué sur deux niveaux, recrée de petites ambiances, essayant de communiquer l'énergie et les qualités des produits exposés. Au niveau inférieur, il y a une grande table de réunion et un espace de formation, disposés de manière périphérique, tandis que le niveau supérieur comprend un lounge de sensations lumineuses et un espace de networking.

Lo showroom, anch'esso distribuito su due altezze, ricrea piccole atmosfere, cercando di comunicare l'energia e le qualità dei prodotti esposti. Al livello inferiore, c'è un ampio tavolo da riunione e area di allenamento collocati in un certo senso, mentre il piano superiore comprende un salone di sensazioni luminose e un'area di networking.

Der Showroom, der sich ebenfalls über zwei Ebenen erstreckt, schafft atmosphärische Zonen und versucht, die Energie und die Qualitäten der ausgestellten Produkte zu vermitteln. Auf der unteren Ebene gibt es einen großen Besprechungstisch und einen Schulungsbereich, der peripher angeordnet ist, während die obere Etage eine Lounge mit leuchtenden Impressionen und einen Netzwerkbereich umfasst.

Hoy en día, los espacios de trabajo deben entenderse como áreas de vida, y su diseño debe ir en la misma dirección.

Nowadays, workspaces have to be understood as living areas, and their design must go in the same direction.

De nos jours, les espaces de travail doivent être compris comme des espaces de vie et leur conception doit aller dans le même sens.

Oggigiorno, le aree di lavoro devono essere intese come aree di vita e il loro design deve andare nella stessa direzione.

Heutzutage müssen Arbeitsräume als Wohnräume verstanden werden, und ihre Gestaltung muss in dieselbe Richtung gehen.

La luz fluye a través de las oficinas y áreas de trabajo, como podemos ver especialmente en el Departamento de Diseño.

The light is flowing through the offices and workspaces, as we can see especially in the Design Department.

La lumière traverse les bureaux et les espaces de travail, comme nous pouvons le constater en particulier dans le Département de Design.

La luce scorre attraverso gli uffici e gli spazi di lavoro, come possiamo vedere nel dipartimento di design.

Das Licht fliesst durch die Büros und Arbeitsbereiche, wie wir in der Konstruktionsabteilung sehen können.

Arkoslight Headquarters, Valencia (Spain) | Design: Francesc Ríte Studio | Architect: Víctor García Martínez Arquitecto | Photography: David Zarzosa, Héctor Rubio

Las nuevas instalaciones cuentan con un 'lounge de sensaciones' donde se muestran en funcionamiento todos los productos de la firma. En este espacio, se pueden comprobar los efectos lumínicos de todas las luminarias que componen el catálogo de Arkoslight.

The new facilities feature a "sensation lounge" in which all of the Company's products are on display and in operation. In this space, we can experience the light effects produced by all the luminaires that make up the catalogue of Arkoslight.

Les nouvelles installations sont dotées d'un « lounge de sensations » dans lequel tous les produits de la Société sont exposés et en fonctionnement.

Dans cet espace, on peut expérimenter les effets lumineux produits par tous les luminaires qui composent le catalogue de Arkoslight.

Le nuove strutture contano con un "lounge di sensazioni". In questo spazio, si possono controllare gli effetti luminosi di tutti gli apparecchi che compongono il catalogo Arkoslight.

Die neuen Räumlichkeiten verfügen über eine „Lounge of Sensations“, in der alle Produkte des Unternehmens in Betrieb gezeigt werden. In diesem Bereich können Sie die Lichteffekte aller Leuchten überprüfen, aus denen der Arkoslight-Katalog besteht.

Arkoslight cuenta con su propio laboratorio para ensayos fotométricos. Este permite la total autonomía de Arkoslight en el estudio de las propiedades luminotécnicas de sus productos, gracias a la alta precisión de su gonioespectrómetro de última generación.

—
Arkoslight has its own laboratory to perform photometric tests. This allows a total autonomy to Arkoslight to study the luminotechnical properties of its products, thanks to the precision of its latest generation Goniospectrophotometer.

—
Arkoslight possède son propre laboratoire pour réaliser des essais photométriques. Celui-ci permet une

autonomie totale à Arkoslight pour l'étude des propriétés luminotechniques de ses produits, grâce à la haute précision de son Gonio-spectrophotomètre de toute dernière génération.

—
Arkoslight ha il suo proprio laboratorio per i test fotometrici. Ciò consente la totale autonomia di Arkoslight nello studio delle caratteristiche di illuminazione dei suoi prodotti, grazie all'alta precisione del suo goniospettrometro di ultima generazione.

—
Dank der Präzision des Goniospektralphotometers der neuesten Generation, kann Arkoslight völlig unabhängig die lichttechnischen Eigenschaften der Produkte messen.

HIGHLIGHTS

BLACK FOSTER

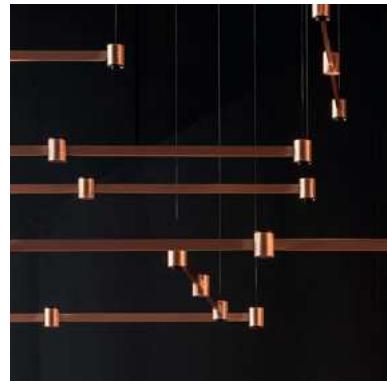

El efecto "The Invisible Black" aplicado en un sistema lineal. Perfecta integración en la arquitectura.

"The Invisible Black" effect applied in a linear system. A perfect integration into the architecture.

L'effet "The Invisible Black" appliqué dans un système linéaire. Une parfaite intégration dans l'architecture.

L'effetto "The Invisible Black" applicato in un sistema lineare. Perfetta integrazione in architettura.

Der "The Invisible Black" Effekt, der in einem linearen System angewendet wird. Perfekte Integration in die Architektur.

ART

La nueva luminaria de suspensión, racional y minimalista, con la que se pueden crear composiciones con un fuerte carácter artístico.

The new rational and minimalist suspended luminaire, that allows to create compositions with a strong artistic character.

Le nouveau luminaire de suspension rationnel et minimaliste, grâce auquel on peut créer des compositions à fort caractère artistique.

Il nuovo apparecchio a sospensione, razionale e minimalista, con cui è possibile creare composizioni dal forte carattere artistico.

Die neue Pendelleuchte, rational und minimalistisch, mit der Sie Kompositionen mit starkem künstlerischem Charakter erstellen können.

PLUS

El proyector que ofrece la capacidad de ampliar o concentrar la apertura del haz de luz con un suave movimiento manual.

The spotlight that allows to widen or reduce the light beam opening, only through a gentle manual movement.

Le projecteur qui offre la possibilité d'agrandir ou de réduire l'ouverture du faisceau de lumière, grâce à un simple mouvement manuel.

Il proiettore che offre la possibilità di espandere o concentrare l'apertura del fascio di luce con un delicato movimento manuale.

Der Strahler bietet die Möglichkeit, den Abstrahlwinkel mit einer leichten manuellen Bewegung zu erweitern oder zu konzentrieren.

FIT

El nuevo proyector de esencia minimalista y múltiples tallas, disponible para sistemas de bajo voltaje.

The new minimalist and multiple size spotlight, available for low voltage installations.

Le nouveau spot au caractère minimaliste et de multiples tailles, disponible pour des installations de basse tension

Il nuovo proiettore di essenze minimaliste e dimensioni multiple, disponibile per sistemi a bassa tensione

Der neue Strahler von minimalistischer Essenz in mehreren Größen, erhältlich für Niederspannungssysteme.

SIX

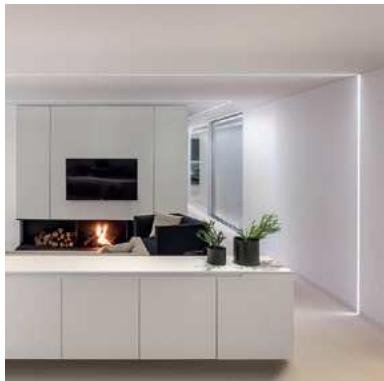

Disponible en tallas más pequeñas para adaptarse a todo tipo de espacios y nuevas versiones de bajo voltaje.

Available in smaller sizes in order to become adaptable to any kind of space. Also available in new low voltage versions.

Disponible en tailles plus petites pour pouvoir s'adapter à tout type d'espace. De nouvelles versions aussi pour la basse tension.

Disponibile in dimensioni più piccole per adattarsi a tutti i tipi di spazi e nuove versioni di bassa tensione.

Erhältlich in diversen Größen, um sich an aller Art von Räumen und neuen Versionen von Niederspannungssystemen anzupassen.

BRIGHT LINE

El perfil para acentuar la arquitectura. Personalizable, permite dibujar líneas rectas, giros en ángulo recto y cambios de plano a 90°.

The profile that enhances the architecture. It is customizable and enables to draw straight lines, right angle turns and plane changes to 90°.

Le profil qui met en valeur l'architecture. Personnalisable, il permet de tracer des lignes droites, des rotations en angles droits, et des changements de plans à 90°.

Il profilo per accentuare l'architettura. Personalizzabile, consente di disegnare linee rette, curve ad angolo retto e cambi piano di 90 gradi.

Das Profil zur Betonung der Architektur. Anpassbar, ermöglicht es Ihnen, gerade Linien, rechtwinklige Ecken und 90-Grad-Ebenenänderungen zu zeichnen.

PUCK

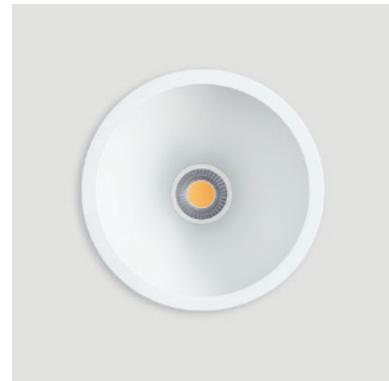

Nuevos tamaños y versión *recessed*.

New size and new recessed version.

De nouvelles tailles et une nouvelle version encastrable.

Nuove dimensioni e versione ad incasso.

Neue Größen und Einbauversionen.

Swap

NEW DIM TO WARM

Permite la modulación sincronizada de la intensidad lumínica y la temperatura de color.

Allows the synchronized light and colour temperature modulation.

Permet la modulation synchronisée de l'intensité lumineuse et de la température de couleur.

Consente la modulazione sincronizzata dell'intensità luminosa e della temperatura del colore.

Ermöglicht die synchronisierte Modulation von Lichtintensität und Farbtemperatur.

HIGHLIGHTS

5 YEARS GUARANTEE

Todos los productos de Arkoslight tienen una garantía de 5 años.

—
All Arkoslight products have a 5 year warranty.

—
Tous les produits de Arkoslight bénéficient d'une garantie de 5 ans.

—
Tutti i prodotti Arkoslight hanno una garanzia di 5 anni.

—
Alle Arkoslight-Produkte haben 5 Jahre Garantie.

REC

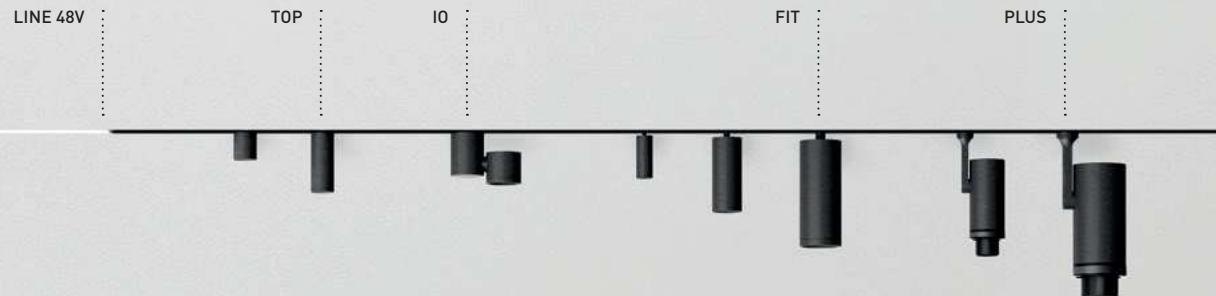

La familia Rec se amplía con una nueva talla y versiones de emisión de luz doble (superior e inferior).

—
The Rec range is growing and now includes a new size and new double light beam versions (upper and lower).

—
La gamme Rec grandit, maintenant dotée d'une nouvelle taille et de versions de double émission de lumière (supérieure et inférieure).

—
La famiglia Rec viene ampliata con una nuova dimensione e versioni a doppia emissione luminosa (superiore e inferiore).

—
Die Rec-Familie wird um eine neue Grösse und doppelte Lichtemissionsvarianten (obere und untere) erweitert.

48Vdc

THE GREAT HIGHLIGHT

UNA AMPLIA GAMA PARA BAJO VOLTAJE

Arkoslight ofrece en este catálogo una nueva y completa gama de nueve familias de producto disponibles para carril de bajo voltaje (48Vdc). En iluminación, esta tensión de alimentación supone un nuevo estándar que permite la miniaturización del carril y sus luminarias. Las soluciones 48Vdc ofrecen una integración más elegante y minimalista de la luz en la arquitectura.

A WIDE RANGE FOR LOW VOLTAGE

Arkoslight offers in this catalogue a new and complete range of nine product ranges available for low voltage tracks (48Vdc). In terms of lighting, this supply voltage means a new standard that allows the miniaturization of the tracks and its luminaires. The 48Vdc solutions offer a more elegant and minimalist integration of the light into the architecture.

UNE VASTE GAMME POUR LA BASSE TENSION

Arkoslight propose dans ce catalogue une nouvelle gamme complète de neuf familles de produits disponibles pour rails de basse tension (48 Vcc). En termes d'éclairage, cette tension d'alimentation suppose un nouveau standard, qui permet

la miniaturisation du rail et de ses luminaires. Les solutions 48Vdc offrent une intégration plus élégante et minimalistique de la lumière dans l'architecture.

UNA AMPIA GAMMA PER LA BASSA TENSIONE

Arkoslight offre in questo catalogo una gamma nuova e completa di nove famiglie di prodotti disponibili per binari a bassa tensione (48Vdc). Nell'illuminazione, questa tensione di alimentazione è un nuovo standard che consente la miniaturizzazione della guida e dei suoi apparecchi di illuminazione. Le soluzioni 48Vdc offrono un'integrazione più elegante e minimalistica della luce nell'architettura

EIN BREITE AUSWAHL FÜR NIEDERSPANNUNG

Arkoslight bietet in diesem Katalog ein neues und komplettes Sortiment von neuen Produktfamilien für die Niederspannungsschiene (48 V DC) an. Bei der Beleuchtung ist diese Versorgungsspannung ein neuer Standard, der die Miniaturisierung der Schiene und ihrer Leuchten ermöglicht. 48VDC-Lösungen bieten eine elegantere und minimalistischere Integration von Licht in die Architektur.

THE INVISIBLE BLACK

RAYTRACE

Gracias a su reflector específicamente diseñado y a su acabado ‘negro técnico’ (N & WN), los rayos de luz de Black Foster & Shot Light no bañan la luminaria y salen directamente al exterior sin tocar la pantalla. Por ello, encendida o apagada, conserva siempre la misma apariencia.

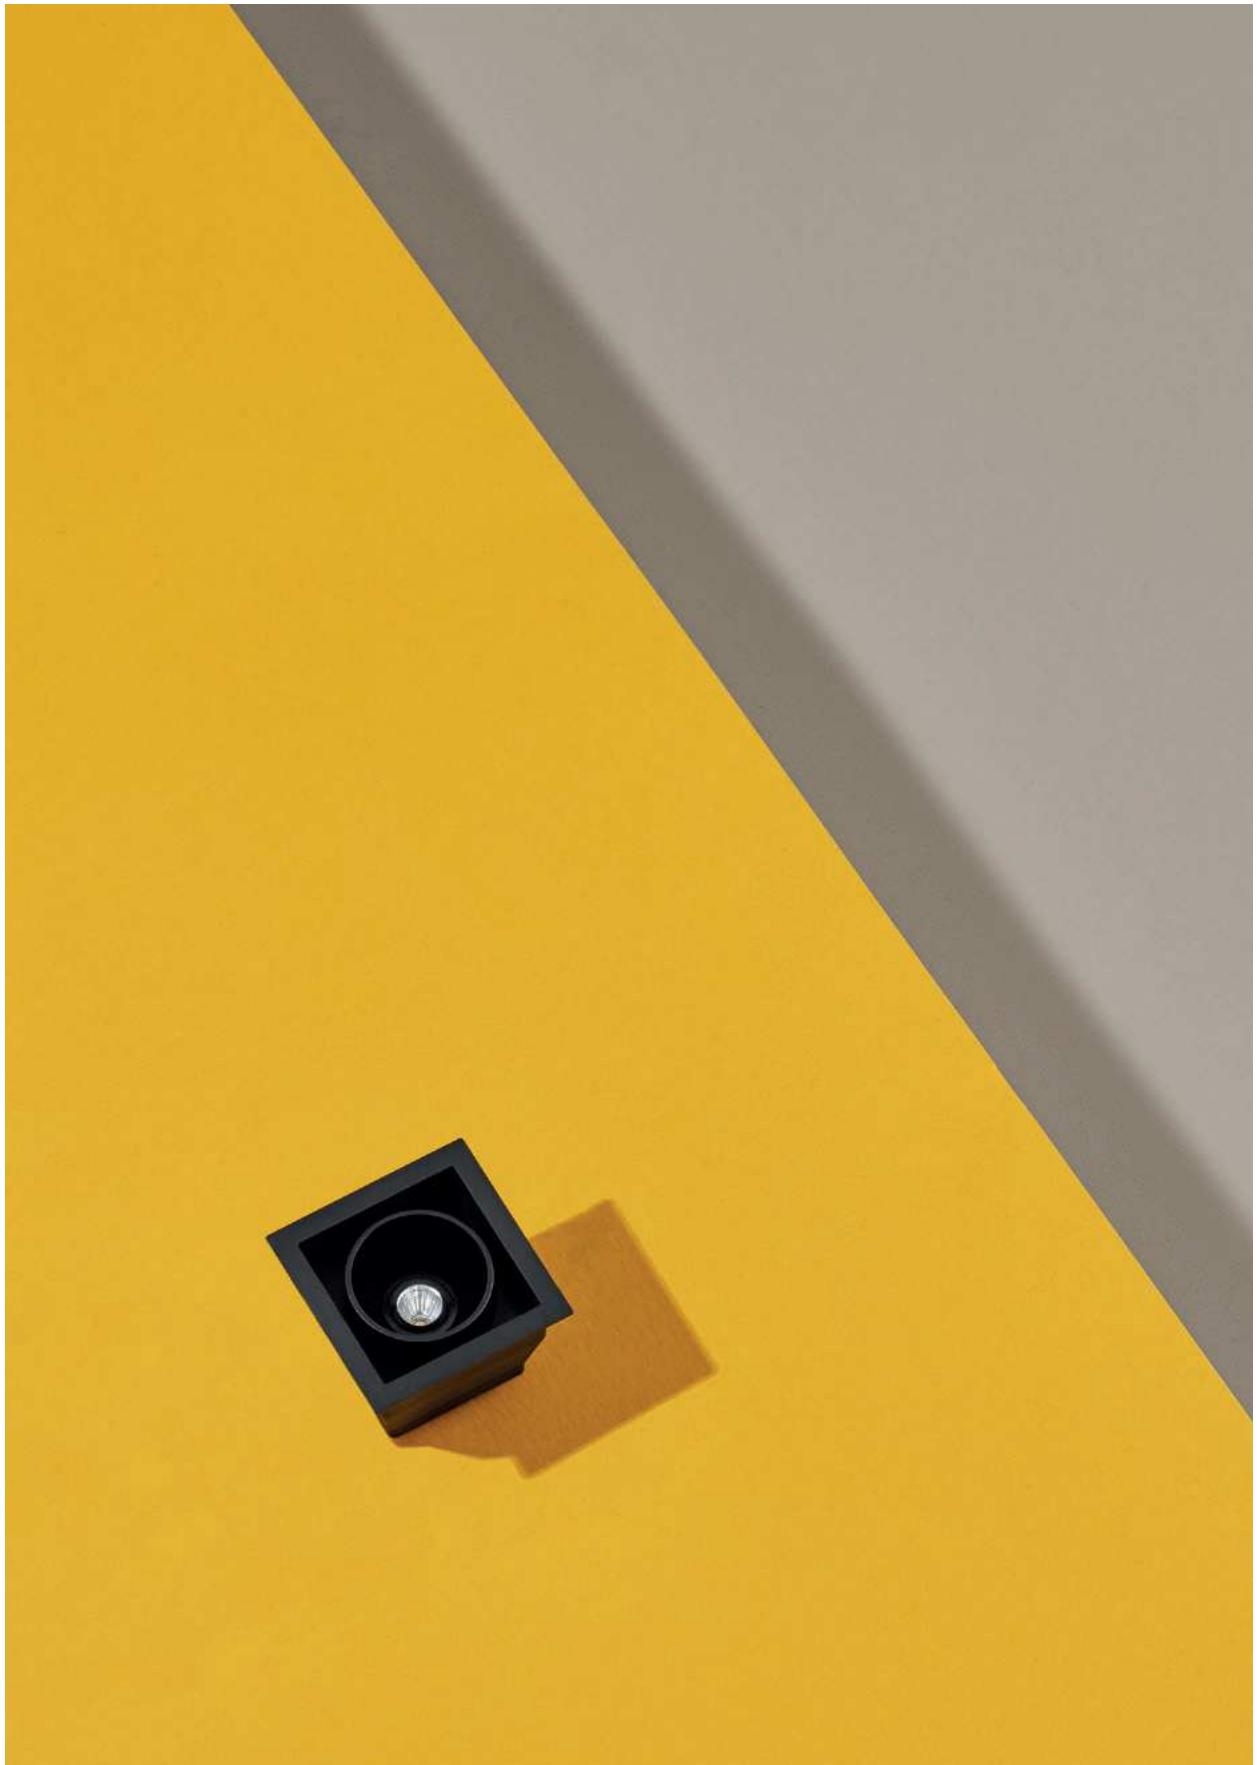

—
Thanks to its specifically designed reflector and its finish “technical black” (N & WN), the light beam of Black Foster & Shot Light does not bathe the luminaire but comes out directly without touching the fittings shade. Thus, independent from being turned on or being turned off, always maintains the same appearance.

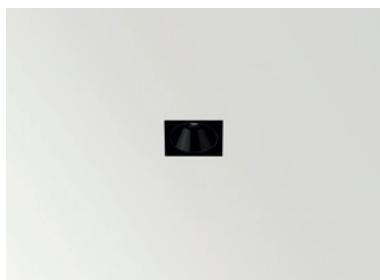

—
Grâce à son réflecteur spécifiquement conçu et sa finition en “noir technique” (N & WN), les rayons de lumière de Black Foster & Shot Light ne couvrent pas le luminaire et sortent directement vers

l’extérieur sans toucher la coupole.
Eteint ou allumé, elle conserve toujours la même apparence.

—
Grazie al suo riflettore appositamente disegnato ed alla sua finitura “nero tec” (N & WN), i fasci di luce dello Black Foster & Shot Light non riflettono sul cono dell’apparecchio. Per questo motivo, sia acceso che spento, preserva sempre la sua apparenza.

—
Dank seines speziell designten Reflektors und seiner speziellen Farbausführung “schwarz, technisch” (N & WN), trifft der Lichtstrahl von Black Foster & Shot Light die Leuchte selbst nicht, sondern strahlt direkt aus der Leuchte heraus, ohne den Leuchtschirm zu tangieren.
Ob ein- oder ausgeschaltet, hat Shot Light Black & Black Foster daher immer das gleiche Erscheinungsbild.

EXTRA BEZEL

BISEL EXTRA

Extra Bezel
Collerette Extra
Cornice Extra
Zusatz-Zierring

Complemento siempre incluido pero de uso opcional. Extiende el bisel de la pieza para cubrir empotramientos mayores, conservando el minimalismo de Swap y su perfecta integración en el techo. Fácil instalación. Ideal para reformas en las que remplazar puntos de luz, con agujeros preexistentes, sin obras en el techo ni volver a pintar. Swap es la mejor opción de actualización al LED, frente a las lámparas de sustitución 'retrofit'.

Accessory always included but for optional use. It extends the piece's bezel to cover larger recesses, keeping Swap's minimalism and its perfect integration into the ceiling. Easy to fit. Ideal for reforms to replace the light spot, with the already existing holes, without altering the ceiling or repainting. Swap is the best option for updating to LED technology by means of a real light fixture with incorporated LED, in contrast to just a retrofit lamp that only implies a less efficient update of the light source.

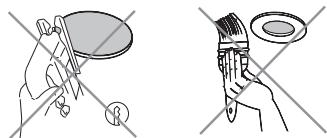

Complément toujours inclus mais à utiliser en option. Élargissement de la collerette de la pièce pour couvrir des encastrements supérieurs tout en préservant le minimalisme de Swap et son intégration parfaite au plafond. Facile à installer. Idéal pour les réaménagements comprenant des points lumineux à remplacer avec des trous préexistants, sans travaux au plafond et sans besoin de repeindre. Swap est la meilleure option d'actualisation au LED, quand le LED et l'appareil d'éclairage sont intégrés, face aux lampes de substitution «retrofit».

Complemento sempre incluso, ma di uso facoltativo. Estende la cornice del pezzo per coprire incassi maggiori, conservando il minimalismo di Swap e la sua perfetta integrazione con il soffitto. Di facile installazione. Ideale per ristrutturazioni in cui è necessario sostituire punti luce, con fori pre-esistenti, senza lavori al soffitto né verniciatura. Swap è la migliore opzione di passaggio al LED rispetto alle lampade di sostituzione 'retrofit' che si limitano ad adeguare soltanto la fonte di luce.

Stets im Lieferumfang enthaltenes Zubehör-Teil, das optional verwendet werden kann, zur Verbreiterung des vorhandenen Zierrings und somit auch der Abdeckung größerer Lochmaße. Dabei bleiben der Minimalismus von Swap und die perfekte Integration in die Decke erhalten. Einfacher Einbau. Ideal bei Renovierungen, um Leuchten an bereits bestehenden Öffnungen ohne Eingriffe an der Decke oder zusätzliche Malerarbeiten auszutauschen. SWAP ist somit die ideale Option auf eine echte LED Leuchte mit integrierter LED aufzurüsten, statt nur mit einer ineffizienten Retrofit-Lampe das Leuchtmittel zu aktualisieren.

La tecnología de regulación DIM to Warm es un método para la modulación sincronizada de la intensidad lumínica y la temperatura de color.

Dentro del rango CCT que la luminaria abarca, ésta otorga la temperatura más fría al 100% de su flujo lumínico. Según se atenúa la intensidad, la luminaria modifica la temperatura de color a valores más cálidos. Cuando la regulación alcanza el mínimo flujo lumínico, la luminaria ofrecerá la temperatura de color más cálida.

Este efecto es semejante al comportamiento que ofrecían las tradicionales bombillas halógenas cuando se las sometía a regulaciones de intensidad.

Muy apreciado en ambientes domésticos, hostelería, etc... el efecto DIM to Warm responde a la vinculación que la temperatura de color y la cantidad de luz tienen con el confort y el bienestar psicológico de las personas. Para momentos del día donde se busca la activación y los biorritmos elevados, la luz fría y abundante es adecuada. Al contrario, en las horas donde se persigue la desactivación y el relax, la temperatura cálida y la luz estrictamente necesaria son las características deseadas.

The DIM to Warm tuning technology is a method for synchronized modulation of light intensity and colour temperature.

Within the CCT limits of this lighting fixture, it provides the coldest temperature at 100% of its luminous flux.

As the intensity fades, the luminaire changes the color temperature to more pleasing values. When the setting reaches the minimum luminous flux, the luminaire is able to provide the warmest colour temperature.

This effect is similar to the behaviour of the traditional halogen bulbs when submitted to intensity variations.

Highly appreciated in domestic environments, hotels, etc... the DIM to Warm effect is the answer to the link that the colour temperature and the amount of light have with the comfort and well-being of the people. For those moments of the day in which activity starts and high biorhythms are required, a cold and abundant light is adequate. On the contrary, when the activity decreases and it is time to relax, a soft temperature and a strictly necessary amount of light are the desired characteristics.

La technologie de réglage DIM to Warm est une méthode pour la modulation synchronisée de l'intensité lumineuse et de la température de couleur.

Dans les limites de CCT de ce luminaire, celui-ci donne la température la plus froide à 100% de son flux lumineux.

A mesure que l'intensité s'atténue, le luminaire modifie la température de couleur à des valeurs plus agréables. Quand le réglage atteint le flux lumineux minimum, le luminaire offrira la température de couleur la plus agréable.

Cet effet est semblable au comportement qu'avaient les ampoules halogènes traditionnelles quand elles étaient soumises à des variations d'intensité.

Très apprécié dans des ambiances domestiques, d'hôtellerie, etc... l'effet DIM to Warm répond au lien que la température de couleur et la quantité de lumière ont avec le confort et le bien-être des personnes. Pour les moments de la journée où on recherche l'augmentation d'activité et des biorhythmes élevés, une lumière froide et abondante est adéquate. Au contraire, pendant les heures où on recherche la baisse d'activité et le relax, la température douce et la lumière strictement nécessaire sont les caractéristiques souhaitées.

—

La tecnologia di regolazione DIM to Warm è un metodo per la modulazione sincronizzata dell'intensità luminosa e della temperatura del colore.

All'interno dell'intervallo CCT coperto dall'apparecchio, fornisce la temperatura più fredda al 100% del suo flusso luminoso. Quando l'intensità diminuisce, l'apparecchio cambia la temperatura del colore a valori più caldi. Quando la regolazione raggiunge il minimo flusso luminoso, l'apparecchio offrirà la temperatura di colore più calda.

Questo effetto è simile al comportamento offerto dalle tradizionali lampadine alogene quando sottoposta a regolazioni di intensità.

Molto apprezzata negli ambienti domestici, nell'ospitalità, ecc... l'effetto DIM to Warm risponde alla connessione che la temperatura del colore e la quantità della luce hanno con il comfort e il benessere psicologico delle persone. Per i momenti della giornata in cui è richiesta l'attivazione e i bioritmi elevati, la luce fredda e abbondante è adeguata. Al contrario, nelle ore in cui l'obiettivo è il rilassamento, la temperatura calda e la luce strettamente necessaria sono le caratteristiche desiderate.

—

Die DIM-to-Warm Technologie ist eine Methode zur synchronisierten Modulation von Lichtintensität und Farbtemperatur.

Innerhalb der CCT-Serie, die die Leuchte abdeckt, gibt sie die kälteste Temperatur bei 100% ihres Lichtstroms. Wenn die Intensität mindert, ändert die Leuchte die Farbtemperatur auf wärmere Werte. Wenn die Dimmung den minimalen Lichtstrom erreicht, bietet die Leuchte die wärmste Farbtemperatur.

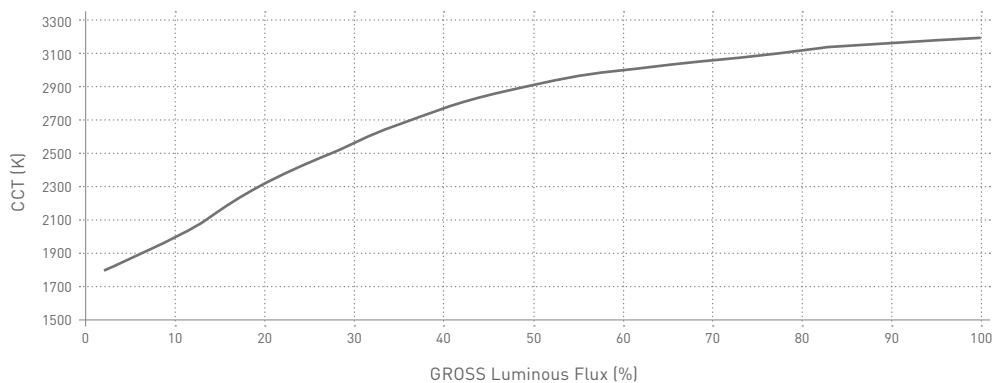

Dieser Effekt ist vergleichbar mit dem Verhalten, das herkömmliche Halogenlampen bei Intensitätsdimmungen bieten.

Sehr geschätzt in häuslichen Umgebungen, Gastgewerbe, usw.... Der DIM to Warm-Effekt reagiert auf die Verbindung, die die Farbtemperatur und die Menge an Licht mit dem Komfort und dem psychologischen Wohlbefinden der Menschen haben. Für Momente des Tages, in denen Aktivierung und erhöhte Biorhythmen gesucht werden, ist kaltes und reichlich vorhandenes Licht ausreichend. Im Gegenteil, in den Stunden, in denen die Deaktivierung und Entspannung angestrebt werden, sind die warme Temperatur und das unbedingt notwendige Licht die gewünschten Eigenschaften.

ORIENTA LA LUZ. HACIA DONDE QUIERAS. CUANDO QUIERAS.

Con Pointer se logra la versatilidad de modificar la dirección del haz de luz a voluntad. Todo, sin necesidad de herramientas, con una sencilla y suave acción manual.

AIM THE LIGHT. WHEREVER YOU WANT. WHENEVER YOU WANT.

With Pointer we have obtained the versatility of modifying the beam direction of light as many times as you wish. All this, without any need for tools, only through a simple and smooth manual action.

ORIENTE LA LUMIÈRE. VERS OÙ TU VEUX. QUAND TU VEUX.

Avec Pointer nous obtenons la versatilité de modifier le sens du faisceau de la lumière

à volonté. Tout cela, sans aucun besoin d'outil, seulement avec une simple et souple action manuelle.

ORIENTA LA LUCE. DOVE VUOI. QUANDO VUOI.

Pointer raggiunge la versatilità di modificare la direzione del fascio a nostro piacimento, a 350°. Solo con una semplice e delicata azione manuale.

RICHTE DAS LICHT AUS. WO IMMER DU WILLST, WANN IMMER DU WILLST.

Mit Pointer haben wir die Vielseitigkeit erhalten, die Strahlrichtung des Lichts so oft zu ändern, wie Sie möchten. All dies, ohne Werkzeug, nur durch eine einfache und reibungslose manuelle Aktion.

Gracias a las lentes de Plus -y su regulador focal-, se puede ajustar fácilmente la amplitud del haz de luz con un suave movimiento manual.

Owing to the Plus lens -and its focal regulator-, the opening of the light beam can be easily adjusted through a gentle manual movement.

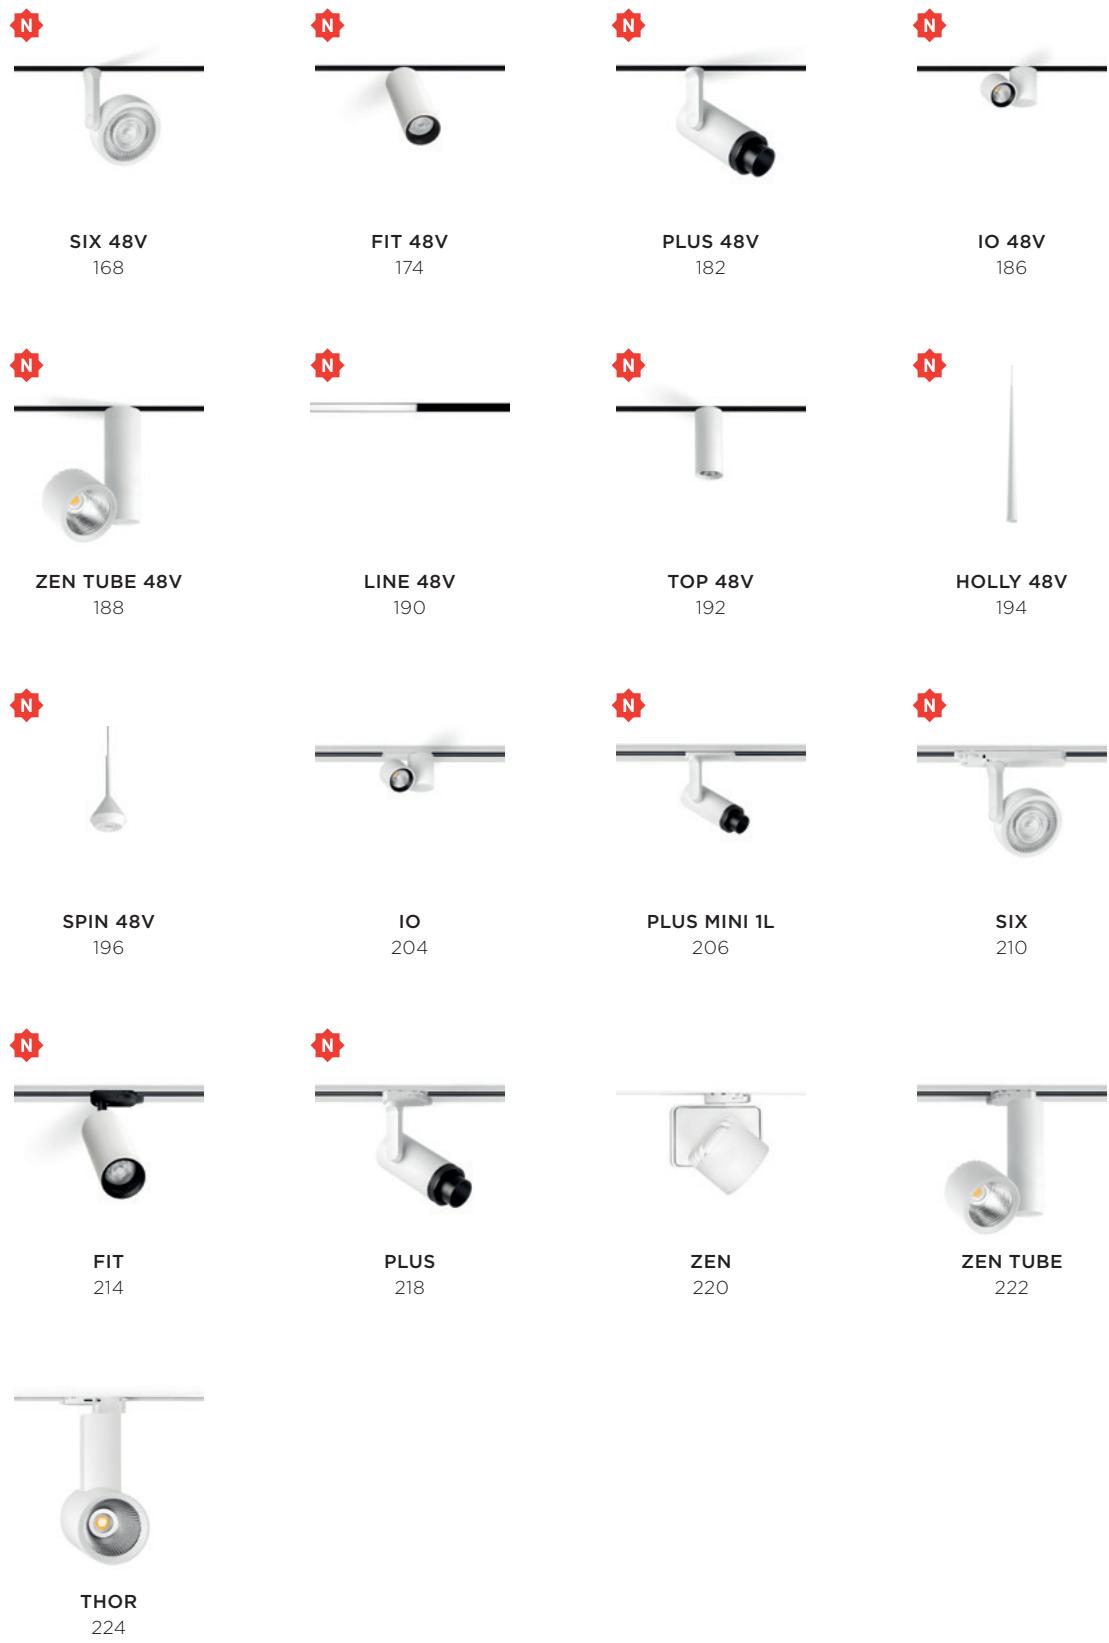

Grâce aux lentilles de Plus – et son régulateur -, il est possible d'ajuster facilement l'amplitude du faisceau de lumière avec un simple mouvement manuel.

Grazie all'obiettivo el Plus - e al suo regolatore focale - la larghezza del fascio può essere facilmente regolata con un delicato movimento manuale.

Dank der Plus-Objektive und des Fokusreglers können Sie die Abstrahlwinkel mit einer leichten manuellen Bewegung einstellen.

El nuevo sistema de carril 48Vdc ofrece una enorme versatilidad. Permite dibujar líneas, giros en ángulo recto y cambios de plano en esquinas a 90°. En él, pueden instalarse desde módulos de luz difusa hasta piezas de suspensión o proyectores.

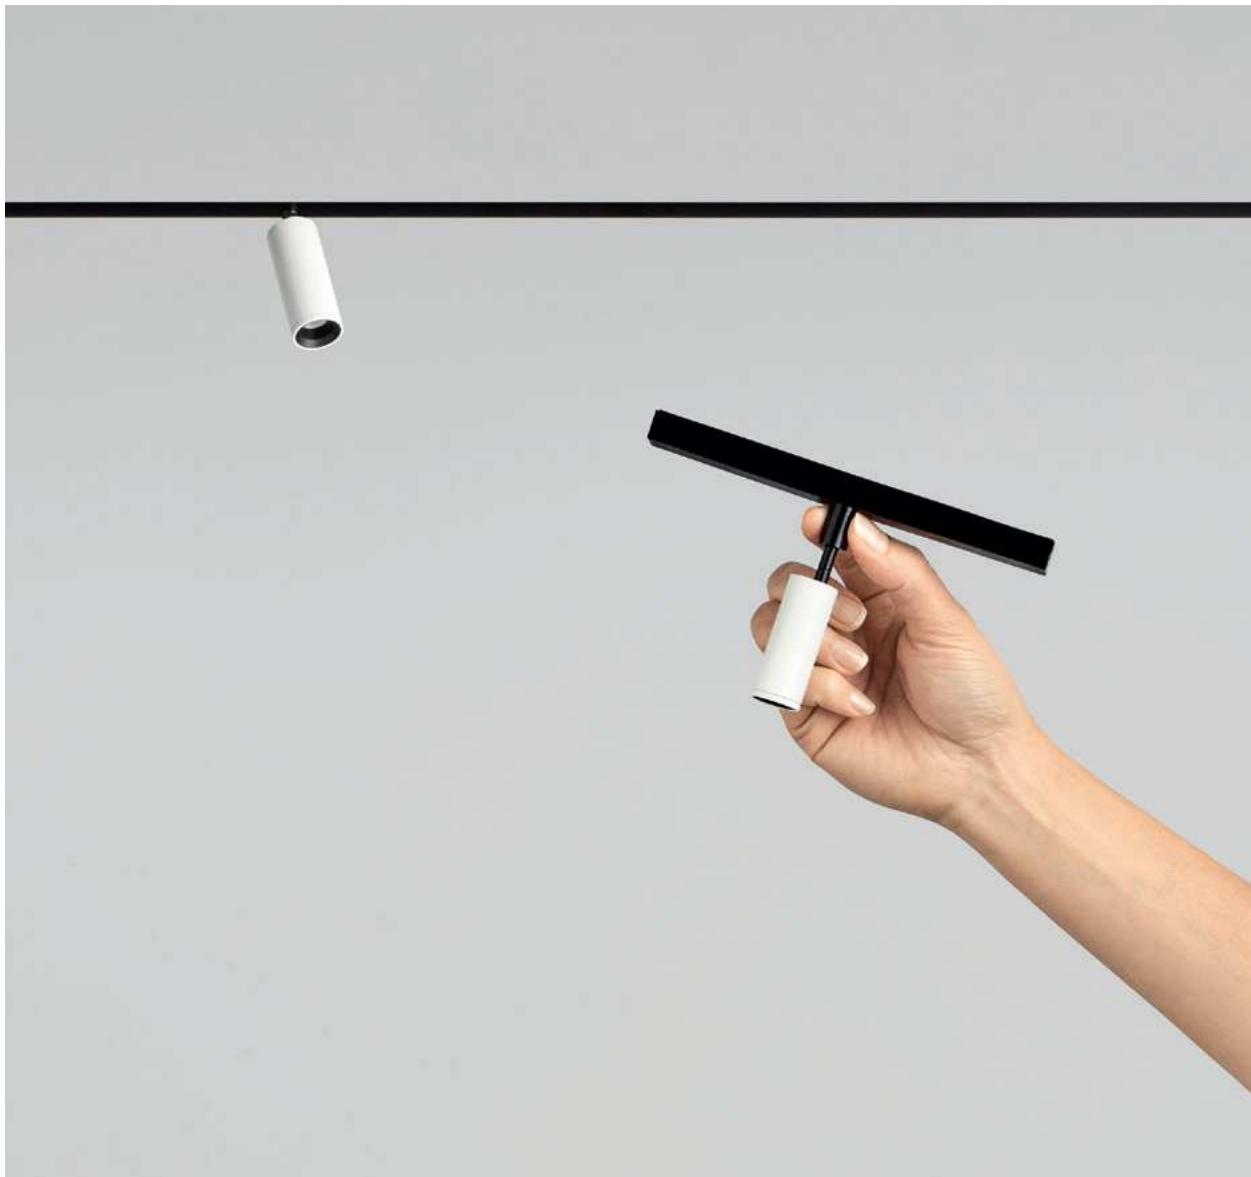

The new 48Vdc track system offers a huge versatility. It allows you to draw lines, right angle turns and plane changes in corners at 90°. With this system, you may install diffuse light modules, suspended lighting fixtures or spotlights.

Le nouveau système de rails 48Vdc offre une grande polyvalence. Il permet de tracer des lignes, des rotations à angle droit et des changements de plans dans

les angles à 90°. On peut y installer aussi bien des modules de lumière diffuse, que des éléments de suspension ou des projecteurs.

Il nuovo sistema a binario a 48 Vdc offre un'enorme versatilità. Permette di disegnare linee, giri ad angolo retto e cambi di piano in angoli a 90°. In esso, possono essere installati da moduli di luce diffusa a parti di sospensione o proiettori.

Das neue 48-VDC-Schienensystem bietet eine enorme Vielseitigkeit. Sie können Linien, rechtwinklige Ecken und Ebenenänderungen in 90° -Ecken zeichnen. Darin können sie von diffusen Lichtmodulen bis zu Aufhängeteilen oder Projektoren installiert werden.

Su sistema de instalación, manual y sin herramientas, es sumamente funcional y sencillo

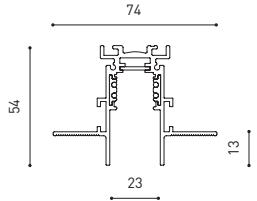

Its manual and tool-less installation system is highly functional and simple.

Son système d'installation manuelle et sans outils est extrêmement fonctionnel et simple.

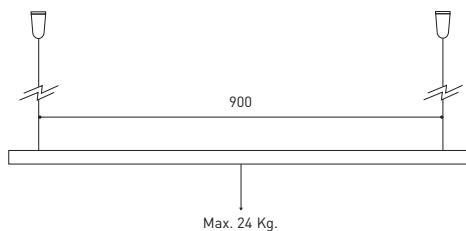

Il suo sistema di installazione manuale e senza strumenti è altamente funzionale e semplice.

Das manuelle Installationssystem und ohne Werkzeug ist äusserst funktional und einfach.

LIGHT DISTRIBUTION ACCESSORIES

ELLIPTICAL REFRACTOR

ELLIPTICAL REFRACTOR

Lente que reformula el haz de luz para conseguir una forma elíptica a través de la refracción de la luz en su cristal óptico.

Lens that modifies the light beam to achieve an elliptical shape through light refraction in its optical glass.

Lentille qui reformule le faisceau lumineux pour obtenir une forme elliptique par le biais de la réfraction de la lumière dans son verre optique.

Lente che riformula il fascio di luce per ottenere una forma ellittica tramite la rifrazione della luce sul suo vetro ottico.

Linse, die das Lichtbündel durch die Lichtbrechung in ihrem optischen Glas in eine elliptische Form umwandelt.

BEAM MIXER DIFFUSER

El difusor homogeneizador del haz de luz suaviza las distorsiones en la emisión de la luz provocadas por las lentes parabólicas, Fresnel o colimadores TIR, sin generar un alargamiento significativo del haz. Su diseño exclusivo consigue una homogeneización de la luz excelente en planos lejanos y una mezcla cromática con una extraordinaria luminosidad axial. Comparado con los difusores tradicionales, mantiene una mayor intensidad de candelas en el centro del haz (CBPC) y disminuye el antiestético efecto de "campos de luz" en ángulos amplios.

The Beam Mixer Diffuser is used to smooth beam artifacts caused by parabolic, Fresnel, or TIR lens collimators without significant broadening. The unique mixing design provides superior far-field smoothing and color mixing with high on-axis brightness. Compared with traditional diffusers, it maintains higher central beam candlepower (CBPC), and produce less undesirable "field light" at higher angles.

Le Diffuseur homogénéisateur de faisceau lumineux s'utilise pour atténuer les distorsions de l'émission de lumières provoquées par les lentilles paraboliques, Fresnel ou collimateurs TIR, sans allonger de manière significative le faisceau. Son design exclusif permet une excellente homogénéisation en champs lointains et un mélange chromatique d'une luminosité axiale remarquable. Comparé avec un diffuseur traditionnel, ce diffuseur maintient une plus haute intensité lumineuse au centre du faisceau (CBPC) et diminue l'indésirable effet "champs de lumière" dans les angles plus amples.

Il Diffusore di fascio luminoso misto serve ad uniformare gli effetti distorsivi del fascio luminoso dovuti ai collimatori con lente parabolica, di Fresnel o TIR senza un allargamento significativo. L'eccezionale design "misto" assicura una migliore uniformità del campo lontano e una miscelazione cromatica con una straordinaria luminosità assiale. Rispetto ai diffusori tradizionali, mantiene una maggiore intensità luminosa in candele al centro del fascio (CBPC) e diminuisce

la sgradevole "luce a lunga gittata" negli angoli più ampi.

Der Strahlenmischdiffusor wird verwendet, um durch parabolische, Fresnel- oder TIR-Linsen-Kollimatoren verursachte Strahlenartefakte ohne wesentliche Ausdehnung zu glätten. Das einzigartige Mischungskonzept sorgt für hochwertige Fernfeldglättung und Farbmischung bei hoher on-axis-Helligkeit. Im Vergleich zu herkömmlichen Diffusoren bewahrt er eine höhere Lichtstärkenspitze (CBPC) und ruft bei größeren Winkeln weniger unerwünschte "Lichtfelder" hervor.

ANTI-GLARE HONEYCOMB LOUVER

Accesorio formado por una parrilla en forma de panel de abeja para reducir el deslumbramiento y la incidencia directa de los rayos en la visión.

Accessory made up of louver in the shape of a honeycomb panel to reduce glare and the effects of direct rays on vision.

Accessoire composé d'une grille en nid d'abeille pour réduire l'éblouissement et l'incidence directe des rayons dans la vision.

Accessorio formato da una griglia a forma di pannello d'ape per ridurre l'abbagliamento e l'incidenza diretta dei raggi durante la visione.

Zubehör in Form eines Wabengitters, um die Blendung und den direkten

Einfall der Strahlen in die Augen zu reduzieren.

ANTI-GLARE ASYMMETRICAL SCREEN

Pantalla accesorio para orientar el haz de luz de manera asimétrica y conseguir, por un lado, reducir el deslumbramiento y, por otro, una distribución lumínica de incidencia lateral (adecuada para aplicaciones de bañador de pared, entre otras).

Accessory screen to direct the light beam in an asymmetrical way and also to reduce glare and to spread the light laterally (suitable for wall washer applications, among others).

Écran accessoire pour l'orientation du faisceau lumineux de manière asymétrique afin de réduire l'éblouissement et d'obtenir une distribution lumineuse d'incidence latérale (appropriée pour les applications de lèche-murs, entre autres).

Schermo accessorio per orientare il fascio di luce in modo asimmetrico ed ottenerne, da un lato, la riduzione dell'abbagliamento e, dall'altro, una distribuzione luminosa ad incidenza laterale (adeguata per applicazioni di wall washer, tra le altre cose).

Optionales Schirm-Accessoire für die asymmetrische Ausrichtung des Lichtbündels, um zum einen die Blendung zu reduzieren und zum anderen einen seitlichen Lichteinfall zu erzielen (zum Beispiel für Wandbestrahlung).

Arkoslight ofrece en algunos de sus productos la posibilidad de dotarlos de un LED especial para iluminación orientada a la promoción visual de bienes y productos con finalidad comercial.

Se trata de un LED de alta cromaticidad que persigue destacar los tonos que favorecen la percepción psicológica positiva del objeto iluminado. Esta fuente de luz LED especial ofrece una paleta de colores más atractiva e intensa, por encima de lo que lo hace un LED convencional. Esto se consigue gracias a la configuración del LED bajo un “parámetro especial de saturación” que consigue que los colores y la textura de los objetos se muestren más atractivos dentro del espectro de luz visible. Para ello se selecciona, en cada caso, el COB pertinente, con su recubrimiento específico de fósforo.

For some of its products, Arkoslight offers the possibility to provide them with a special LED, designed to create an illumination focused on visually promoting goods or products for commercial purposes. It is a high chromaticity LED, capable of identifying the colour shades that produce a positive psychological perception of the illuminated object.

This special LED lighting source offers a much more attractive and intense colour range than a conventional LED, besides being much wider. Technically, this is possible thanks to a special LED setting that includes a « special saturation parameter », capable of highlighting the objects colours and materials in such a way that they seem more attractive within the visible light spectrum. To achieve this performance, in each case, the appropriate COB and specific phosphor coating are carefully selected.

Arkoslight vous offre sur certains de ses produits la possibilité de les équiper d'un LED spécial, qui a été conçu pour une illumination orientée à la promotion visuelle de biens ou produits à des fins commerciales. Il s'agit d'un LED de haute chromaticité permettant de mettre en évidence les tons qui favorisent une perception psychologique positive de l'objet illuminé.

Cette source de lumière LED spéciale vous offre une palette de couleurs plus attractive et intense, et plus vaste que celle d'un LED conventionnel. Ceci est possible grâce à la configuration du LED qui inclue un “paramètre spécial de saturation”, lequel réussit à ce que les couleurs et la texture des objets apparaissent de manière plus attractive dans le spectre de lumière visible. Pour ce faire, le COB correspondant est sélectionné en fonction de chaque cas, et il en est de même pour son revêtement spécifique en phosphore.

Arkoslight offre su alcuni dei suoi prodotti la possibilità di dotarli di un LED speciale per illuminazione orientata alla promozione visiva di beni e prodotti a scopo commerciale.

Si tratta di un LED ad alta cromaticità che mette in rilievo le tonalità che favoriscono la percezione psicologica positiva dell'oggetto illuminato. Questa sorgente di luce LED speciale offre una gamma di colori più attraenti e intensi, superiore a quella che può offrire un LED convenzionale. Ciò si ottiene grazie alla configurazione del LED secondo un “parametro speciale di saturazione” che fa in modo che i colori e la texture degli oggetti appaiano più attraenti all'interno dello spettro di luce visibile. A tale scopo si seleziona, in ciascun caso, l'apposito COB e il suo fosforo di rivestimento specifico.

Einige der Produkte von Arkoslight können mit einer Spezial-LED für die visuelle Bewerbung von Waren und Produkten zur Verkaufsförderung ausgerüstet werden.

Dabei handelt es sich um eine hochchromatische LED, um Farbtöne hervorzuheben, die die positive psychologische Wahrnehmung des beleuchteten Objekts begünstigen.

Diese spezielle LED-Lichtquelle bietet eine ansprechendere und intensivere Farbpalette als eine herkömmliche LED. Dies wird durch die Konfiguration der LED nach einem "speziellen Sättigungsparameter" erreicht, der Farben und Textur der Objekte innerhalb des sichtbaren Spektralbereichs attraktiver erscheinen lässt. Dafür wird die jeweils zweckdienliche COB und spezifische Phosphorbeschichtung gewählt.

NOTA SOBRE LOS VALORES EXPRESADOS EN ESTE CATÁLOGO

Los valores de potencia (W) y flujo lumínico (Lm) expresados en este catálogo corresponden a la fuente de luz. Si desea conocer los valores de potencia del sistema (que incluye el consumo del driver), éstos están recogidos en la ficha técnica de cada referencia, disponible en www.arkoslight.com

CRITERIOS DE CALIDAD EN LA SELECCIÓN DEL LED

Arkoslight selecciona minuciosamente sus fuentes de luz LED teniendo en cuenta el método de categorización "binning".

Durante la producción de LEDs, debido a las tolerancias de fabricación, existen variaciones en el flujo, la temperatura de color y el voltaje. Por este motivo se clasifica la producción de LEDs en "BINs", según estos parámetros. Al elegir las fuentes de luz de sus luminarias, Arkoslight selecciona los "BINs" o grupos a los que pertenecerán todos los LED que se emplearán en las luminarias de producción. Así, se logra reducir el rango de tolerancias de estas tres características y se garantiza mayor estabilidad en el flujo lumínoso, el voltaje y la temperatura de color.

LUMEN

El lumen (lm) es la unidad para medir el flujo lumínoso, una medida de la potencia lumínosa emitida por la fuente. El flujo lumínoso es la medida de la potencia lumínosa total que emite una lámpara y que es percibida por el ojo humano.

LUX

El Lux (lx) es la unidad que mide el nivel de iluminación tomando como referencia un punto concreto. El Lux también puede ser definido como nº de lúmenes /m².

La diferencia entre el lux y el lumen consiste en que el lux toma en cuenta la superficie sobre la que el flujo lumínoso se distribuye. 1000 lúmenes, concentrados sobre un metro cuadrado, iluminan esa superficie con 1000 lux. Los mismos mil lúmenes, distribuidos sobre 10 metros cuadrados, producen una iluminancia de sólo 100 lux. En otras palabras, iluminar un área mayor al mismo nivel de lux requiere un número mayor de lúmenes.

ESTABILIDAD CROMÁTICA

Según el standard CIE 1931, en el diagrama cromático usado para describir todos los colores que puede percibir el ojo humano, se han definido regiones (llamadas elipses MacAdam) que agrupan los colores que son indistinguibles entre sí. Esta agrupación permite establecer una medida para determinar las diferencias entre coordenadas cromáticas: los pasos MacAdam o SDCM (Standard Deviation Color Matching).

Dentro de una tolerancia de desviación Step MacAdam 1, la diferencia percibida entre los colores es inexistente. Hasta 3 pasos MacAdam, la diferencia es prácticamente inapreciable y la temperatura de color de la luz LED se considerará homogénea.

Arkoslight selecciona cuidadosamente -de entre el catálogo de sus proveedores-, las fuentes de luz LED adecuadas para conseguir una estabilidad cromática homogénea entre las diferentes unidades de una misma luminaria, sea cual sea el momento de su producción. La práctica totalidad de luminarias de Arkoslight están dentro del rango MacAdam Step 2.

CRI

El índice de reproducción cromática (CRI) es una escala cuantitativa que mide la capacidad de la luz para reproducir fielmente la veracidad de los colores comparados con su reproducción bajo la luz natural -que representa el ideal de fidelidad 100%-.

IK

El grado de protección IK es una clasificación numérica internacional para los grados de protección proporcionados por las envolventes de materiales eléctricos contra los impactos mecánicos externos.

Código IK	IK00	IK01	IK02	IK03	IK04	IK05	IK06	IK07	IK08	IK09	IK10
Energía de impacto *	0.15	0.20	0.35	0.50	0.70	1	2	5	10	20	julio

CÓDIGO IP

Sistema de codificación para indicar los grados de protección proporcionados por una envoltura contra el acceso a partes peligrosas, la penetración de cuerpos sólidos extraños y la penetración de agua. El código IP está formado por dos cifras situadas inmediatamente después de las letras "IP", cuyo significado se expresa en la siguiente tabla:

PRIMERA CIFRA		SEGUNDA CIFRA
IP	Protección contra contactos eléctricos directos	Protección contra penetración de cuerpos sólidos extraños
0	Ninguna protección	Ninguna protección
1	Penetración mano	Cuerpos ø > 50 mm
2	Penetración dedo ø > 12 mm y 80 mm de longitud	Cuerpos ø > 12,5 mm
3	Penetración herramienta	Cuerpos ø > 2,5 mm
4	Penetración alambre	Cuerpos ø > 1 mm
5	Penetración alambre	Puede penetrar polvo en cantidad no perjudicial
6	Penetración alambre	No hay penetración de polvo
7	---	---
8	---	Inmersión prolongada (Material sumergible) bajo las condiciones indicadas por el fabricante

1-10V

Regulación continua a través de señal analógica de control. El 1-10V permite la regulación de modo continuo. Los niveles de iluminación pueden establecerse entre el 10% y el 100% de luz de salida. Conectando un driver 1-10V a un punto de control de la luz el sistema proporciona una regulación continua.

PHASE CUT

El recorte de fase se realiza sin necesidad de una línea de control adicional, conectando un regulador en serie entre la línea de alimentación y el equipo. Dependiendo como se realiza el recorte de la tensión de red se puede distinguir entre Leading-edge y Trailing-edge.

PUSH DIM

La regulación por pulsación no posee un standard y existen diferentes opciones de cableado e instalación para este tipo de regulación según cada fabricante de equipos. Usualmente serán necesarios uno o dos cables extra para su instalación, según cada fabricante.

DALI

El protocolo DALI permite conectar juntos equipos de regulación de diferentes fabricantes. Un sistema DALI consiste en un controlador y uno o más dispositivos de iluminación que cuentan con una interfaz DALI. El controlador puede monitorear cada intensidad de luz ofreciendo hasta 256 niveles de regulación entre apagado y 100%. Existe una extensión Wireless para el sistema DALI.

DSI

Para la formación de grupos de luminarias con un óptimo uso energético, por ejemplo en pabellones deportivos y naves de producción, se dispone de soluciones conformadas en torno al sistema modularDIM y la interfaz digital DSI. La programación sencilla de escenas es una de las atractivas funciones que ofrece un sistema de gestión de iluminación DSI, como también lo es la posibilidad de un tendido común - en un único canal -, de la línea de control y la línea de alimentación de la red. La transmisión digital garantiza la omisión de interferencias, además de un nivel de regulación idéntico en todas las luminarias.

SEGURIDAD ELECTRICA

Luminaria de Clase I:

Luminaria en la que la protección contra los choques eléctricos no recae exclusivamente sobre el aislamiento principal, sino que tiene una medida de seguridad suplementaria bajo la forma de medios de conexión de las partes conductoras accesibles a un conductor de protección puesto a tierra.

Luminaria de Clase II:

Luminaria en que la protección contra los choques eléctricos no recae únicamente sobre el aislamiento principal, sino que comprende medidas de seguridad suplementarias, tales como el doble aislamiento o el aislamiento reforzado y en las que no existen medios de puesta a tierra de protección o dependencia de las condiciones de la instalación.

Luminaria de Clase III:

Luminaria en la que la protección contra los choques eléctricos recae en la alimentación con muy baja tensión de seguridad y en la que no se generan tensiones superiores a ésta.

TEMPERATURA DE COLOR

La temperatura de color de una Fuente de luz se mide en grados kelvin (K)

Temperaturas de color superiores a los 5000K se conocen como colores fríos (azul-blanco) mientras que temperaturas entre los 2700 y 3000K son consideradas colores cálidos.

UGR

UGR es una escala que unifica los diferentes métodos de evaluación del deslumbramiento. El UGR trata de describir una percepción subjetiva en términos medibles considerando el deslumbramiento potencial de todas las luminarias situadas dentro del campo visual de un observador. Los valores oscilan entre 10 y 30, donde 10 significa "no deslumbramiento" y 30 significa "deslumbramiento perturbador".

El UGR no es una característica propia de la luminaria, sino de la instalación, por lo que los UGR dados en este catálogo se han calculado usando una instalación estándar. Recomendamos el cálculo del UGR concreto de su instalación, para asegurar el valor deseado. En este catálogo todos los UGR se han calculado bajo los valores: 4H 2H Shr1

NOTE CONCERNING THE VALUES INDICATED IN THIS CATALOGUE

The power (W) and luminous flux (Lm) values indicated in this catalogue correspond to the lighting source. In case you wish to know the power values of the system (including the driver's consumption), you may find them on the Technical Data Sheet of each item, available on: www.arkoslight.com

QUALITY CRITERIA TO SELECT THE LEDS

Arkoslight selects with the highest care its LED lighting sources , using the "binning" classification method.

During the production process of the LEDs, and taking into account the production tolerances, some variations of the flux, the colour temperature or the voltage usually occur. For this reason , the production of the LEDs is classified in "BINs", according to the formerly mentioned parameters. At the moment of choosing the lighting sources for its luminaires, Arkoslight always selects the "BINs" or the groups corresponding to all the LEDs to be used for the luminaires to be produced. Proceeding this way, we are able to reach a significant reduction of the tolerance range of these 3 characteristics, and also we can guarantee a better stability of the luminous flux, the voltage and the colour temperature.

LUMEN

The lumen (lm) is the unit that measures the luminous flux, a measurement of the luminous output emitted by the source. The luminous flux is the measurement of total luminous output emitted by a lamp and that is perceived by the human eye.

LUX

The Lux (lx) is the unit that measures the degree of illumination taking a specific point as the reference. The Lux can also be defined as nºº of lumens /m².

The difference between the lux and the lumen lies in that fact that the lux takes into account the surface over which the luminous flux is distributed. 1000 lumens concentrated over a square meter illuminate this surface with 1000 lux. The same one thousand lumens distributed over 10 square meters, only produce illuminance of 100 lux. In other words, illuminating a bigger area with the same degree of lux requires a greater number of lumens.

CHROMATIC STABILITY

According to the CIE 1931 Standard, in the chromatic diagram used to describe all the colours that the human eye can perceive, some regions (called MacAdam ellipses) have been defined, in order to put together the colours that cannot be distinguished. Such grouping allows to establish a measure in order to identify the differences between the chromatic coordinates: the MacAdam steps or SDCM (Standard Deviation Colour Matching). Within a deviation tolerance of 1 step MacAdam, the difference perceived between colours does not exist. Up to 3 steps MacAdam , the difference can hardly be perceived and the colour temperature of the LED lighting is considered as homogeneous.

Arkoslight selects carefully the most appropriate LED lighting sources (from its suppliers' catalogues), in order to reach an homogeneous chromatic stability between the different units of a single luminaire, regardless of when it was produced. Most of the Arkoslight luminaires belong to step 2 MacAdam category.

CRI

A color rendering index (CRI) is a quantitative measure of the ability of a light source to reveal the colors of various objects faithfully in comparison with an ideal or natural light source.

IK

The IK protection level is an international numeric classification for the degrees of protection provided by enclosures for electrical materials against external mechanical impacts.

IK Code	IK00	IK01	IK02	IK03	IK04	IK05	IK06	IK07	IK08	IK09	IK10
Impact energy (joules)	*	0.15	0.20	0.35	0.50	0.70	1	2	5	10	20

IP CODE

Coding system that indicates the levels of protection achieved by means of a coating against access to hazardous parts, intrusion of solid foreign bodies and water ingress. The IP code is composed of two digits located immediately after the letters "IP", and whose meaning is explained in the table below:

	SECOND CHIFFRE	SECOND FIGURE
IP	Protection against direct electrical contacts	Protection against intrusion of solid foreign bodies
0	No protection	No protection
1	Hand protection	Bodies of $\varnothing > 50$ mm
2	Finger protection $\varnothing > 12$ mm and 80 mm long	Bodies of $\varnothing > 12,5$ mm
3	Tool protection	Bodies of $\varnothing > 2,5$ mm
4	Metal wire protection	Bodies of $\varnothing > 1$ mm
5	Metal wire protection	Dust can enter in a harmless quantity.
6	Metal wire protection	No entry of dust.
7	---	Temporary immersion
8	---	Constant immersion (submersible material) under manufacturer's conditions.

1-10V

Continuous dimming via analog control signal 1-10V feature enables analog dimming in a step-less manner. Light levels can be set anywhere between 10% to 100% of light output. By connecting a 1-10V equipped driver to a light point controller, the feature can provide continuous dimming.

PHASE CUT

Phase control (PFC), also called phase cutting, is a method of pulse-width modulation for power limiting, applied to AC voltages. It works by modulating a thyristor, silicon-controlled rectifier, triode for alternating current, thyatron, or other such gated diode-like devices into and out of conduction at a predetermined phase of the applied waveform.

PUSH DIM

So called as the only control required is a push-to-make switch, is also known as Touch Dimming. No 'standard' exists, so various wiring methods exist depending on driver/ballast manufacturer. Needs standard mains wiring plus either one or two extra wires (depending upon driver/ballast variant).

DALI

DALI enables equipment from different manufacturers to be connected together. DALI network consists of a controller and one or more lighting devices that have DALI interfaces. The controller can monitor and control each light's intensity providing up to 256 levels of brightness between off and 100%. Wireless extension is available for DALI network.

DSI

To optimise the energy consumption of extensive groups of luminaires, for example in sports stadiums or factories, there are solutions based on the modularDIM system and the DSI digital interface. The attractive functions of a DSI lighting management system include simple programming of scenes and the option of common routing of the control line and mains power supply cabling in one duct. Digital transmission means no problems of interference and an identical dimming value for all the luminaires. protection classes

CLASS I LUMINAIRES:

Luminaires in which the protection against electric shocks does not depend exclusively on the main insulation, but on an additional safety device such as a connecting system between the accessible conductive parts and the earth protection conductor.

CLASS II LUMINAIRES:

Luminaires in which the protection against electric shocks does not depend exclusively on the main insulation, but on additional safety devices, such as double insulation, or reinforced insulation, and on which there is no earth protection system protection nor any dependence on the conditions of the installation.

CLASS III LUMINAIRES:

Luminaires on which the protection against electric shocks depends on the supply of very low safety voltage and on which the voltage created is not higher than the one supplied.

COLOR TEMPERATURE

The colour temperature from a light source is measured in degrees Kelvin (K). Colour temperatures over 5000K are known as cold colours (blue-white) while temperatures between 2700 and 3000K are considered as warm colours.

UGR

UGR is a scale that unifies different glare evaluation methods.

The UGR describes subjective perception in measurable terms considering the potential glare of all the luminaires located within the observer's field of vision. The ratings oscillate between 10 and 30, where 10 means "no glare" and 30 means "discomfort glare". The UGR value is not a characteristic of the luminaire itself, but of the complete installation, for what we calculated the UGR values stated in our catalogue based on a common standard installation. We recommend the calculation of the UGR in your installation in practice to assure the desired UGR value. All in this catalogue stated UGR's are calculated under the values: 4H 2H Shr1

NOTE SUR LES VALEURS INDIQUÉES DANS CE CATALOGUE

Les valeurs de puissance (W) et de flux lumineux (Lm) indiquées dans le présent catalogue correspondent à la source de lumière. Si vous souhaitez connaître les valeurs de puissance du système (lequel inclut la consommation du driver), elles sont indiquées sur la fiche technique de chaque référence, disponible sur www.arkoslight.com

CRITÈRES DE QUALITÉ LORS DE LA SÉLECTION DES LEDS

Arkoslight sélectionne minutieusement ses sources de lumière LED, appliquant la méthode de classification par "binning".

Pendant la production des LEDs, et tenant en compte des tolérances de fabrication, il existe des variations dans le flux, la température de couleur et le voltage. Pour cette raison, la production de LEDs est classifiée en "BINs", selon ces paramètres. Au moment de choisir les sources de lumières de ses luminaires, Arkoslight sélectionne les "BINs" ou les groupes auxquels appartiendront tous les LEDs qui seront employés dans les luminaires à produire. Ainsi, nous arrivons à réduire le rang de tolérances de ces trois caractéristiques et à garantir une plus grande stabilité du flux lumineux, du voltage et de la température de couleur.

LUMEN

Le lumen (lm) est l'unité de mesure du flux lumineux, une mesure de la puissance lumineuse émise par la source. Le flux lumineux est la mesure de la puissance lumineuse totale émise par une lampe et perçue par l'œil humain.

LUX

Le Lux (lx) est l'unité de mesure du niveau d'éclairage pris comme référence à un point donné. Le Lux peut également être défini comme le nombre de lumens / m². La différence entre le lux et le lumen est que le lux prend en compte la surface sur laquelle le flux lumineux est distribué. 1000 lumens, concentrés sur un mètre carré, éclairent cette surface avec 1000 lux. Les mêmes mille lumens distribués sur 10 mètres carrés produisent un éclairage de 100 lux seulement. En d'autres termes, l'éclairage d'une aire supérieure au même niveau de lux exige davantage de lumens.

STABILITÉ CHROMATIQUE

Selon la Norme CIE 1931, dans le diagramme chromatique utilisé pour décrire toutes les couleurs que l'œil humain peut percevoir, des régions (appelées ellipses MacAdam) ont été définies pour grouper les couleurs qui sont impossible de distinguer entre elles. Ce regroupement permet d'établir une mesure pour déterminer les différences entre les coordonnées chromatiques : les pas MacAdam ou SDCM (Standard Deviation Colour Matching). Dans la tolérance de déviation Step MacAdam 1, la différence perçue entre les couleurs est inexistante. Jusqu'à 3 pas MacAdam, la différence est pratiquement inappréciable et la température de couleur de la lumière LED se considère homogène.

Arkoslight sélectionne avec soin – à partir des catalogues de ses fournisseurs-, les sources de lumière LED les plus appropriées pour obtenir une stabilité chromatique homogène entre les différentes unités d'un même luminaire, quel que soit le moment de sa production. Pratiquement la totalité des luminaires de Arkoslight se situe dans le rang MacAdam Step 2.

CRI

L'indice de rendu des couleurs (CRI en anglais) est une mesure quantitative de la capacité d'une source lumineuse de reproduire les couleurs des objets de manière réaliste par rapport à un idéal ou à la lumière naturelle.

IK

Le degré de protection IK est un classement numérique international pour les degrés de protection obtenus par les enveloppes des pièces électriques contre les chocs mécaniques externes.

Code IK	IK00	IK01	IK02	IK03	IK04	IK05	IK06	IK07	IK08	IK09	IK10
Energie d'impact (joules)	*	0.15	0.20	0.35	0.50	0.70	1	2	5	10	20

CODE IP

Système de codification servant à indiquer les niveaux de protection, obtenus grâce à un revêtement, contre l'accès aux parties dangereuses, la pénétration de corps solides étrangers et la pénétration d'eau. Le code IP est formé par deux chiffres situés immédiatement après les lettres "IP", et dont le sens est expliqué dans le tableau ci-dessous :

	PREMIER CHIFFRE	SECOND CHIFFRE
IP	Protection contre des contacts électriques directs	Protection contre la pénétration de corps solides étrangers
0	Aucune protection	Aucune protection
1	Protection main	Corps $\varnothing > 50$ mm
2	Protection doigt $\varnothing > 12$ mm et 80 mm de longueur	Corps $\varnothing > 12,5$ mm
3	Protection outil	Corps $\varnothing > 2,5$ mm
4	Protection fil métallique	Corps $\varnothing > 1$ mm
5	Protection fil métallique	La poussière peut pénétrer un quantité non préjudiciable.
6	Protection fil métallique	Il n'y a pas de pénétration de poussière.
		Forts jets d'eau dans toutes les directions.

7	---	---	Immersion temporaire
8	---	---	Immersion prolongée (matériel submersible) dans les conditions indiquées par le fabricant.

1-10V

La plage de gradation continue et le signal de commande analogique.

La caractéristique 1-10V permet une gradation analogique en un minimum d'étapes. Tous les niveaux d'éclairage peuvent être réglés entre 10 % et 100 % de la sortie de lumière d'une source. En connectant un driver doté du système 1-10V à un contrôleur de point lumineux, on peut obtenir une gradation continue.

PHASE CUT

Le contrôle de phase (PFC), également appelé coupure de phase, est une technique de modulation de la largeur d'impulsions permettant de limiter la puissance, appliquée aux tensions alternatives. Il fonctionne en modulant un thyristor, un redresseur commandé au silicium, un triode de courant alternatif, un thyratron, ou tout autre dispositif à diode similaire en conduction ou non dans une phase prédefinie de l'onde appliquée.

PUSH DIM

Ce que l'on appelle « contrôle unique requis » est un interrupteur à poussoir, également appelé Gradation au toucher. Il n'y a pas de « standard », il y a différentes méthodes de câblage selon chaque fabricant de driver/ballast. Il est nécessaire d'avoir un câblage électrique standard plus un ou deux câbles supplémentaires (selon chaque variante de driver/ballast)

DALI

DALI permet la connexion des équipements de différents fabricants entre eux.

Le réseau DALI inclut un contrôleur et un ou plusieurs dispositifs d'éclairage dotés d'interfaces DALI. Le contrôleur peut surveiller et contrôler l'intensité lumineuse de chacune des lampes en donnant jusqu'à 256 niveaux de luminosité entre 0 % et 100 % Extension sans fil disponible pour réseau DALI.

DSI - SIMPLE ET FONCTIONNEL

Pour réaliser des groupes de luminaires à énergie optimisée, dans les halles de sport ou de production par exemple, les solutions basées sur le système modularDIM et l'interface numérique DSI sont tout indiquées. La gestion de l'éclairage DSI offre une série de fonctions attrayantes, comme la programmation aisée de scénarios lumineux et la possibilité de poser les lignes de commande dans la même gaine que les câbles d'alimentation. La transmission numérique garantit l'absence de perturbations et un niveau de gradation identique pour tous les luminaires. Système de protection

LUMINAIRE DE CLASSE I:

Luminaire sur lequel la protection contre les chocs électriques ne dépend pas exclusivement de l'isolation principale, mais d'un dispositif de sécurité supplémentaire sous forme de moyens de connexion des parties conductrices accessibles à un conducteur de protection mis à terre.

LUMINAIRE DE CLASSE II:

Luminaire sur lequel la protection contre les chocs électriques ne dépend pas exclusivement de l'isolation principale, mais de dispositifs de sécurité supplémentaires, comme une double isolation, ou une isolation renforcée, et sur lequel il n'existe pas de système de mise à terre de protection ou de dépendance des conditions de l'installation.

LUMINAIRE DE CLASSE III:

Luminaire sur lequel la protection contre les chocs électriques dépend de l'alimentation de très basse tension de sécurité et sur lequel la tension créée n'est pas supérieure à celle-ci.

TEMPÉRATURE DE COULEUR

La température de couleur d'une Source lumineuse est mesurée en degrés kelvin (K) Les températures de couleur de plus de 5000K sont connues sous le nom de couleurs froides (bleu-blanc) alors que les températures de 2700 à 3000K sont considérées comme des couleurs chaudes.

UGR

UGR est une échelle permettant d'unifier les différentes méthodes d'évaluation de l'éblouissement. L'UGR a pour objet de décrire une perception subjective en termes mesurables en considérant l'éblouissement potentiel de tous les luminaires situés dans le champ visuel d'un observateur. Les valeurs varient entre 10 et 30, où 10 signifie « absence d'éblouissement » et 30 signifie « éblouissement perturbateur ». L'UGR est une caractéristique du contexte de l'installation, pas de la luminaire. Donc les renseignements inclus dans ce catalogue ont été étudiés dans une installation standard. Nous recommandons le calcul de l'UGR concret de votre installation, pour vérifier les valeurs et assurer l'indice souhaité. Dans ce catalogue tous les UGR ont été calculés avec les valeurs : 4H 2H Shr1.

NOTA SUI VALORI ESPRESI IN QUESTO CATALOGO

I valori di potenza (W) e di flusso luminoso (lm) espressi in questo catalogo corrispondono alla sorgente luminosa. Per conoscere i valori di potenza del sistema [che comprende il consumo del driver], si rimanda alla scheda tecnica di ciascun articolo, disponibile su www.arkoslight.com

QUALITÀ NELLA SELEZIONE DEI LED

Arkoslight seleziona minuziosamente le sue sorgenti di luce LED tenendo conto del metodo di classificazione "binning".

Durante la produzione dei LED, dovuto alle tolleranze di fabbricazione, esistono variazioni nel flusso, la temperatura di colore e il voltaggio. Per questo motivo la produzione di LED è classificata in "BIN", secondo questi parametri. Nella scelta delle sorgenti luminose dei suoi apparecchi di illuminazione, Arkoslight seleziona i "BIN" o gruppi a cui appartengono tutti i LED che saranno utilizzati negli apparecchi di illuminazione in produzione. In questo modo, si riesce a ridurre le tolleranze di queste tre caratteristiche e si garantisce una maggiore stabilità del flusso luminoso, del voltaggio e della temperatura di colore.

LUMEN

Il lumen (lm) è l'unità per misurare il flusso luminoso, una misura della potenza luminosa emessa dalla fonte. Il flusso luminoso è la misura della potenza luminosa totale emessa da una lampada e percepita dall'occhio umano.

LUX

Il Lux (lx) è l'unità che misura il livello d'illuminazione prendendo come riferimento un punto concreto. Il Lux può essere definito anche come n° di lumen/m². La differenza tra il lux e il lumen consiste nel fatto che il lux considera la superficie sulla quale si distribuisce

il flusso luminoso. 1000 lumen, concentrati in un metro quadrato, illuminano questa superficie con 1000 lux. Gli stessi mille lumen, distribuiti su 10 metri quadrati, producono un'illuminazione di soli 100 lux. In altre parole, illuminare un'area maggiore con lo stesso livello di luce, richiede un numero maggiore di lumen.

STABILITÀ CROMATICA

Secondo la norma CIE 1931, nel diagramma cromatico usato per descrivere tutti i colori che l'occhio umano può percepire, sono state definite regioni [chiamate ellissi MacAdam] che raggruppano i colori che sono indistinguibili tra loro. Questo raggruppamento permette di stabilire una misura per determinare le differenze tra coordinate cromatiche: gli step MacAdam o SDCM (Standard Deviation Color Matching).

All'interno di una tolleranza di deviazione Step MacAdam 1, la differenza percepita tra i colori è inesistente. Fino allo Step MacAdam 3, la differenza è praticamente impercettibile e la temperatura di colore della luce LED è considerata omogenea. Arkoslight seleziona con cura -tra i cataloghi dei suoi fornitori-, le sorgenti di luce LED adatte per ottenere una stabilità cromatica omogenea tra le varie unità di uno stesso apparecchio di illuminazione, qualsiasi sia il momento della loro fabbricazione. Praticamente tutti gli apparecchi di illuminazione di Arkoslight sono all'interno del range MacAdam Step 2.

CRI

Un indice rendering di colore (CRI) è un'unità di misura dell'abilità di una sorgente luminosa di rivelare i colori di vari oggetti fedelmente, rispetto a una sorgente luminosa ideale o naturale.

IK

Il grado di protezione di IK è una classificazione numerica internazionale per i gradi di protezione forniti dai materiali elettrici di rivestimento contro gli impatti meccanici esterni.

Codice IK IK00 IK01 IK02 IK03 IK04 IK05 IK06 IK07 IK08 IK09 IK10

Energia d'impatto * 0.15 0.20 0.35 0.50 0.70 1 2 5 10 20

(luglio)

CODICE IP

Codice del grado di isolamento rispetto alla penetrazione di corpi estranei solidi potenzialmente dannosi e di acqua. Il codice IP è formato da due cifre situate immediatamente dopo le lettere "IP", il cui significato è espresso nella tabella seguente:

	PRIMA CIFRA	SECONDA CIFRA
IP	Protezione contro il contatto elettrico diretto	Protezione contro la penetrazione di corpi estranei solidi
0	Nessuna protezione	Nessuna protezione
1	Protetto dal contatto con la mano	Corpi ø > 50 mm
2	Protetto dal contatto con le dita ø > 12 mm e 80 mm de lunghezza	Corpi ø > 12,5 mm
3	Protetto dall'inserimento di piccoli corpi estranei con strumenti	Corpi ø > 2,5 mm
4	Protetto dall'inserimento di fil di ferro	Corpi ø > 1 mm
5	Protetto dall'inserimento di fil di ferro	Protetto dall'accesso di polvere in quantità non dannosa
6	Protetto dall'inserimento di fil di ferro	Nessun acceso di polvere
7	---	---
8	---	---

1-10V

Smorzamento continuo tramite segnale di controllo analogico. La funzionalità di 1-10V attiva lo smorzamento analogico in maniera graduale. I livelli di luce possono essere selezionati in qualsiasi punto di luce in uscita tra 10% e 100%. Collegando un driver 1-10V a un punto di controllo di luce, la funzione è in grado di fornire uno smorzamento continuo.

PHASE CUT

Il controllo di fase (PFC), chiamato anche diluizione di fase, è un metodo di modulazione a larghezza d'impulso per limitare la Potenza, applicata a voltaggi AC. Funziona attraverso la modulazione di un tiristore, un interruttore controllato al silicio, un triodo per corrente alternata, un thyratron o un altro tipo di dispositivo a diodo controllato, in entrata e in uscita da una conduzione a una determinata fase di tracciato applicato.

PUSH DIM

Così chiamato in quanto il solo tipo di controllo richiesto è un interruttore a pulsante, altrimenti conosciuto come Dimmer Rotativo.

Non esiste alcuno "standard", perciò esistono vari tipi di collegamenti elettrici secondo il produttore del driver/ballast. Ha bisogno dei circuiti di rete elettrica standard più uno o due cavi extra (secondo la variane driver/ballast).

DALI

DALI consente la connessione in uno di vari elementi, provenienti da diversi produttori. La rete DALI si compone di un regolatore e uno o più dispositivi di luce con l'interfaccia DALI. Il regolatore può monitorare e controllare l'intensità di ogni punto luce consentendo oltre 256 livelli di luminosità tra 0 e 100%.

È disponibile la versione wireless per la rete DALI.

DSI

Per ottimizzare il consumo energetico di svariati gruppi di corpi illuminanti, ad esempio negli stadi sportivi o nelle fabbriche, vi sono soluzioni basate sul sistema modularDIM e sull'interfaccia digitale DSI. Tra le positive funzioni del sistema per la gestione del flusso luminoso DSI si annoverano la programmazione semplice degli scenari e l'opzione di instradamento comune della cablatura della linea di regolazione e dell'alimentazione di rete in un unico condotto. La trasmissione digitale non comporta alcun problema di interferenze ed ha un valore di dimmerazione identico per tutti i corpi illuminanti.

CLASSI DI ISOLAMENTO

ILLUMINAZIONE DI CLASSE I:

Illuminazione in cui la protezione contro gli shock elettrici non è unicamente affidata all'isolamento principale, esiste una misura di sicurezza supplementare sotto forma di mezzo di connessione delle parti conduttrici, accessibili ad un conduttore di protezione e messa a terra.

ILLUMINAZIONE DI CLASSE II:

Illuminazione in cui la protezione contro gli shock elettrici non è unicamente affidata all'isolamento principale, esistono misure di sicurezza supplementari come il doppio isolamento o l'isolamento rinforzato, sistemi in cui non esistono mezzi di messa a terra di protezione o vincoli nelle condizioni di installazione.

ILLUMINAZIONE DI CLASSE III:

Illuminazione in cui la protezione contro gli shock elettrici è affidata al sistema di alimentazione a bassa tensione in cui non si genera mai un carico di tensione superiore.

TEMPERATURA DI COLORE

La temperatura di colore di una Fonte di luce si misura in gradi kelvin (K). Temperature di colore ai 5000K si conoscono come colori freddi (azzurro-bianco) mentre le temperature tra i 2700 e 3000K sono considerate come colori caldi.

UGR

È una scala che unifica i vari metodi di valutazione dell'abbagliamento.

L'UGR cerca di descrivere una percezione soggettiva in termini di misura, considerando l'abbagliamento potenziale di tutti i punti luce situati all'interno del campo visivo di un osservatore. I valori oscillano tra 10 e 30, dove 10 significa "non abbagliamento" e 30 significa "abbagliamento molesto".

L'UGR è una caratteristica dallo spazio illuminato, non è dell'apparecchio. L'UGR di questo catalogo è calcolato secondo un layout standard. Si consiglia di calcolare l'UGR proprio del vostro spazio. In questo catalogo, l'UGR è stato calcolato in base ai valori: 4H 2H Shr1.

HINWEIS ZU DEN IN DIESEM KATALOG VERWENDETEN WERTEN

Die in diesem Katalog verwendeten Werte im Hinblick auf Leistung (W) und Lichtstrom (Lm) beziehen sich auf die Lichtquelle. Wenn Sie die Leistungswerte des Systems (einschließlich des Verbrauchs des Vorschaltgerätes) wissen möchten, finden Sie diese im technischen Datenblatt des jeweiligen Artikels auf www.arkoslight.com

QUALITÄT BEI DER LED-AUSWAHL

Arkoslight wählt seine LED-Lichtquellen besonders sorgfältig unter Berücksichtigung der Klasseneinteilungsmethode "Binning" aus.

Während der LED-Fertigung ergeben sich durch Herstellungstoleranzen Abweichungen bei Lichtstrom, Farbtemperatur und Spannung. Darum wird die LED-Produktion nach diesen Parametern in "BINs" sortiert. Bei der Auswahl der Lichtquellen für die Leuchten entscheidet sich Arkoslight für die "BINs" oder Gruppen, denen alle LEDs angehören, die bei den Leuchten der Produktion eingesetzt werden sollen. Auf diese Weise wird eine Verringerung des Toleranzbereiches dieser drei Merkmale erzielt und mehr Stabilität in Bezug auf Lichtstrom, Spannung und Farbtemperatur gewährleistet.

LUMEN

Das Lumen (lm) ist die Einheit, um den Lichtstrom zu messen, die Maßeinheit der Lichtstärke einer Lichtquelle.

Der Lichtstrom ist die Maßeinheit der totalen Lichtstärke, die eine Lampe ausgibt und vom menschlichen Auge wahrgenommen wird.

LUX

Das Lux (lx) misst die Beleuchtungsstärke auf einer Flächeneinheit. Das Lux kann als Anzahl der Lumen / m² definiert werden.

Der Unterschied zwischen Lux und Lumen ist, dass das Lux die Fläche berücksichtigt auf welche der Lichtstrom verteilt wird. 1000 Lumen konzentriert auf einem Quadratmeter beleuchten diese Fläche mit 1000 Lux. Die gleichen tausend Lumen verteilt auf 10 Quadratmetern produzieren eine Beleuchtung von nur 100 Lux. Mit anderen Worten, eine größere Fläche mit gleichem Lux-Anteil zu beleuchten erfordert eine höhere Anzahl von Lumen.

FARBSTABILITÄT

Gemäß Standard CIE 1931 wurden in dem zur Beschreibung aller vom menschlichen Auge wahrnehmbaren Farben verwendeten Farbdiagramm Bereiche (sogenannte MacAdam-Ellipsen) mit Gruppen von Farben definiert, die nicht voneinander unterschieden werden können. Durch diese Gruppierung kann ein Maß zur Bestimmung der Unterschiede zwischen Farbkoordinaten festgesetzt werden: die MacAdam Stufen oder SDCM (Standard Deviation Color Matching).

Innerhalb einer zulässigen Abweichung von 1-MacAdam Ellipse existiert kein wahrnehmbarer Unterschied zwischen der einen und der anderen Farbe. Bis zu 3-MacAdam Ellipsen ist der Unterschied praktisch nicht wahrnehmbar und die Farbtemperatur des LED-Lichts gilt als homogen.

Aus dem Spektrum seiner Zulieferer wählt Arkoslight sorgfältigst die geeigneten LED-Lichtquellen aus, um eine homogene Farbstabilität bei allen Einheiten ein und desselben Leuchten-Modells unabhängig vom Herstellungsdatum zu gewährleisten. So gut wie alle Leuchten von Arkoslight befinden sich innerhalb des Bereichs 2-MacAdam Ellipsen.

CRI

Ein Farbwiedergabeindex (CRI) ist das quantitative Messen der Kapazität einer Lichtquelle die Farben verschiedener Objekte im Vergleich zum idealen oder natürlichen Licht getreu wiederzugeben.

IK

Der IK-Stoßfestigkeitsgrad bzw. die IK-Schutzart ist ein Maß bzw. eine internationale numerische Klassifizierung für die Widerstandsfähigkeit von Gehäusen elektrischer Betriebsmittel gegen mechanische Beanspruchung, insbesondere Stoßbeanspruchung.

Es gibt zehn Schutzarten, entsprechend der Schlagenergie, der das Gehäuse mindestens standhalten kann.

IK Code	IK00	IK01	IK02	IK03	IK04	IK05	IK06	IK07	IK08	IK09	IK10
Schlagenergie	*	0.15	0.20	0.35	0.50	0.70	1	2	5	10	20

SCHUTZARTEN – IP-CODE

Die Schutzart gibt an, in welchem Masse ein elektrisches Betriebsmittel (wie z.B. Leuchten, LEDs oder Betriebsgeräte) gegen äussere Einflüsse wie das Eindringen von Fremdkörpern, Wasser und gegen Berührung geschützt ist. Der IP-Code besteht aus zwei Ziffern, die sich unmittelbar nach den Buchstaben „IP“ befinden und deren Bedeutung in der folgenden Tabelle ausgedrückt wird.

	ERSTE KENNZIFFER		ZWEITE KENNZIFFER
IP	BERÜHRUNGSSCHUTZ	FREMDKÖRPERSCHUTZ	WASSERSCHUTZ
0	kein Schutz	kein Schutz	kein Schutz
1	Schutz gegen den Zugang mit dem Handrücken	Fremdkörper ø > 50 mm	Schutz gegen Tropfwasser
2	Schutz gegen den Zugang mit einem Finger ø > 12 mm y 80 mm de Länge	Fremdkörper ø > 12,5 mm	Schutz gegen fallendes Tropfwasser, 15° de la vertical
3	Schutz gegen den Zugang mit Werkzeug	Fremdkörper ø > 2,5 mm	Schutz gegen fallendes Sprühwasser bis 60° genen die Senkrechte
4	Schutz gegen den Zugang mit einem Draht	Fremdkörper ø > 1 mm	Schutz gegen allseitiges Spritzwasser
5	Vollständiger Schutz gegen Berührung	Schutz gegen Staub in schädigender Menge	Schutz gegen starkes Strahlwasser
6	Vollständiger Schutz gegen Berührung	Kein Eindringen von Staub	Schutz gegen starkes Strahlwasser unter erhöhtem Druck
7	---	---	Schutz gegen Zeitweiliges Untertauchen
8	---	---	Schutz gegen dauerndes Untertauchen

1-10V

Kontinuierliches Dimmen per analogem Kontrollsiegel

1-10 V Funktion ermöglicht ein analoges stufenloses Dimmen. Lichtmengen können zwischen 10 bis 100% der Lichteistung eingestellt werden. Beim Anschluss eines 1-10 V Treibers an eine Lichtpunktsteuerung, bietet diese Funktion die Möglichkeit eines kontinuierlichen Dimmens.

PHASENSCHNITT

Die Phasenanschnittsteuerung (PFC) oder der Phasenschmitt ist eine Methode der Pulsweitenmodulation zur Leistungsbegrenzung für AC Wechselspannungen. Es funktioniert mit der Regulierung eines Thyristor, ein gesteuerter Silizium-Gleichrichter, einer Triode für Wechselstromanwendungen, ein Thyatron oder andere gleich gespannte Dioden-Geräte, und aus der Stromleitung in einer festgelegten Phase der angewandten Wellenform.

PUSH DIM

So genannt, da die einzige erforderliche Kontrolle ein Schalter der Art „drücken zum verbinden“ ist; ebenso bekannt als Tastregulierung oder touch dimming.

Es gibt keinen spezifischen Standard, wodurch verschiedene Verdrahtungsmethoden je nach Hersteller des Treibers/Vorschaltgeräts existieren.

Benötigt eine Verdrahtung des Standard-Stromnetzes und ein oder zwei zusätzliche Kabel (je nach Ausführung des Treibers/Vorschaltgeräts).

DALI

DALI ermöglicht Vorrichtungen verschiedener Hersteller miteinander zu verbinden.

Das DALI Netzwerk besteht aus einer Steuerung und einem oder mehreren Beleuchtungseinrichtungen, die über DALI Schnittstellen verfügen. Die Steuerung kann jede Lichtintensität überprüfen und kontrollieren und stellt bis zu 256 Helligkeitsstufen zwischen Ausgeschaltet und 100% bereit.

Eine Drahtlose Erweiterung ist für das DALI Netzwerk erhältlich.

DSI

Zur energieoptimalen Realisierung ausgedehnter Leuchttengruppen, z.B. in Sport- oder Produktionshallen, bieten sich Lösungen basierend auf dem modularDIM-System und der digitalen Schnittstelle DSI an. Die einfache Programmierung von Szenen gehört ebenso zu den attraktiven Funktionalitäten eines DSI-Lichtmanagements wie die Möglichkeit der gemeinsamen Verlegung von Steuerleitung und Netzspannungsversorgung in einem Kanal. Die digitale Übertragung garantiert Störungsfreiheit und einen identischen Dimmwert bei allen Leuchten.

SCHUTZKLASSE

SCHUTZKLASSE I

Schutzklasse I schützt durch eine Isolierung spannungsführender Teile (= Basisisolierung) und durch den Anschluss berührbarer Metallteile an den Schutzleiter (= Erdung) vor zu hohen Berührungsspannungen.

SCHUTZKLASSE II

In dieser Schutzklasse sind spannungsführende Teile mit einer zusätzlichen Schutzisolierung versehen, wie doppelte Isolierung oder verstärkte Isolierung, und bei dem es keinen Schutz gegen Erdung oder Abhängigkeit von den Bedingungen der Installation gibt

SCHUTZKLASSE DER KLASSE III:

Leuchten, bei der der Schutz gegen Stromschläge auf die Stromversorgung mit sehr niedriger Sicherheitsspannung fällt und bei der keine grösseren Spannungen erzeugt werden.

FARBTEMPERATUR

Die Farbtemperatur einer Lichtquelle wird in Kelvin (K) gemessen.

Farbtemperaturen über 5000K sind als kalte Farben (blau-weiß) bekannt, während Temperaturen zwischen 2700 und 3000K als warme Farben bezeichnet werden.

UGR

UGR ist ein Verfahren, das die verschiedenen Methoden zur Bewertung der Blendung miteinander vereint. Das UGR versucht eine subjektive Wahrnehmung messbarer Zustände zu beschreiben, unter Berücksichtigung der potentiellen Blendung alter Lichtquellen innerhalb des Sichtfeldes eines Betrachters. Die Werte schwanken zwischen 10 und 30, wobei 10 „keine Blendung“ und 30 „störende Blendung“ bedeutet.

Der UGR-Wert ist wohlgerne kein Merkmal der Leuchte selbst, sondern ein Kennwert der gesamten Installationssituation, weshalb die in unserem Katalog angegebenen UGR-Werte auf einer üblichen Standard-Installation basieren. Wir empfehlen Berechnung des UGR-Wertes in Ihrer konkreten Installation, um den gewünschten Wert sicherzustellen. Alle in diesem Katalog angegebenen UGR-Werte wurden berechnet mit den Werten: 4H 2H Shr1
