kreon aplis 60

kreon aplis 60 is a new range of round shaped recessed downlights with an aperture of 60mm.

Equipped with the newest high performance faceted reflector in a fixed downlight or wallwash luminaire they offer optimal efficiency and uniformity.

High lumen output can be generated out of a discreet aperture. The light emission in the primary beam of the downlight is precise and sharp without any diffusion.

The combination of a flood optic with UGR<19 and a tunable white 2700K to 5000K makes kreon aplis 60 a perfect tool to bring general lighting in an office space, while the wide flood downlight makes it possible to illuminate spaces efficiently with a minimum of luminaires.

The powerful wallwasher ensures uniform light distribution with high lux values on vertical surfaces.

kreon dolma track

kreon dolma 40 with integrated 48Vdc magnetic track is a new made-to-measure profile that creates functional light through the discrete presence of simple architectural volumes.

The cylindrical kreon holon or cubical kreon prologe luminaires protrude slightly from the recessed profile housing. These low voltage track modules, in single or double, are available as a downlight for general lighting or as a wallwash for vertical illuminance.

Additionally, other kreon 48Vdc track luminaires such as kreon lini 10 and kreon diapason 40 fit on the kreon dolma 40 track. The system allows a combination of modules for direct, indirect and linear lighting, a perfect way to enhance the spacial feeling of the room.

kreon dolma 40 track demonstrates how architecture can be defined by light and turns the ceiling into a flexible architectural playground.

REMARKS
kreon dolma 40 track profile is supplied on requested length. Required track profiles need to be ordered separately and cut to the required length on site.

❶ In case the 48Vdc tracks need to be shortened during installation, use the special pliers to cut back the copper wires of the track.

kreon inti

kreon inti is a fully recessed downlight with a refined patented optical system.

kreon inti fixed downlight has a build in dome set above a black or white internal louvre. The faceted dome adds a scattering play of brilliance and creates a first layer of ambiance.

kreon inti directional combines the dome effect of the downlight with a decentralized directional spotlight that has an angular adjustment of 30°. The diffused light from the dome neutralizes the shadow of the directional spotlight in the light effect. The directional light creates the second layer of focused light.

The unique combination of a diffused downlight with a directional projector make kreon inti a two-in-one recessed ceiling luminaire.

kreon kagi

kagi means "key" in Japanese referring to the shape of a keyhole, which equals the shape of the profile, and mimics the key to a 3-dimensional world.

kreon kagi is an innovative and extremely versatile profile system combining linear and accent lighting.

The basic 24V profile can be either recessed or surface mounted and can optionally be equiped with 16mm or 26mm diameter satinated continuous light tubes for a sustained soft light distribution.

An engenious junction allows a perpendicular, 90° tilted second level connection of the 24V profile.

Additionally, round or square shaped spotlights and wallwashers can be added by clamping them on the main profiles. It is possible to change the position of the spotlights over the track. kreon kagi is an essential tool for architects and lighting designers that can be used as a graphic play of light or guide light.

kreon raga

kreon raga is a geometrically shaped exterior bollard luminaire complemented by black steel that reflect its mass. The units are sealed to IP66 and are fitted with spoon shaped reflectors to provide an attractive surrounding glow.

kreon raga horizontal directs its light symmetrically to the ground. Additional ground pins and concrete anchors ensure a firm installation in any type of ground. Sealants and weatherproof coatings protect kreon raga against acid rain and salt.

kreon side

The kreon side concept originated from the need to provide ambient and placement lighting from within vertical surfaces.

The faceted reflectors ensure a uniform asymmetrical beam without sharp edges or hotspots. They also provide a wash of light that, when mounted downward, can provide orientation through spaces, or, when mounted upward, produce a ceiling glow that effectively increases ambient levels within an interior.

A soft yet striking light beam and the steep bevel of the finishing louvre draws attention to the straight vertical back surface which can be finished in various materials according to the designer's preference. kreon side, available in widths of 25, 40 and 80 mm can be merged perfectly into the architecture and combined with other kreon luminaires.

kreon stripe

kreon stripe 25 is a semi-recessed ceiling luminaire characterised by a compact volume hosting a single or double deepset downlight or a single wallwasher.

kreon stripe 25 combines small rythmic pools of accent lighting with homogeneous wall washing light effects.

The semi-recessed wallwasher can also be applied in wall to use the luminaire as a ceiling or floor washer for corridor applications.

High efficient optics provide efficient, glare free light and even light distribution. Finished in black for a dramatic contrast or pure white to disappear in the surrounding architecture.

kreon holon

kreon holon is a range of surface mounted, track mounted and pendant cylindrical downlights characterised by its compact form and deep set LED position, providing a subtle feeling of light without a possible uncomfortable visual perception. The range uses a variety of LED modules and is available in two diameters to suit spatial requirements. With a choice of fixed or directional units, kreon holon can provide a discreet yet functional solution to general or accent lighting within architecture. Finished in black for a dramatic contrast or pure white.

kreon holon directional is spotlight with a rotational adjustment of 360° and an angular adjustment of 90°, which when combined with the choice of spot, flood, wide floor, darklight or wide darklight reflector, provides a truly versatile general or accent lighting tool. kreon holon directional can be surface mounted or used on our 48V magnetic track system.

kreon holon fixed can be surface mounted or suspended and is the perfect solution for general or accent lighting and features a spot, flood or wide flood reflector set above the black or white internal louvre. Use kreon holon fixed to create pools or accents of light.

kreon holon 40 book is a wall-mounted variation with a reinforced arm for intensive use.

kreon onn

The simple and archetypical volume of kreon onn-wall creates an indirect ambient lighting making it an ideal fixture for highlighting all types of ceilings. kreon onn-wall 165 and 300 comes in two beam options. Narrow beam using TIR (Total Internal Reflection) lens technology for a forward thrown light distribution without hotspots on the wall or wide beam using faceted reflectors for a high output and evenly spread indirect light distribution.

kreon side in-line

The kreon side in-line concept originated from the need to provide ambient and placement lighting from within vertical surfaces. The faceted reflectors which are incorporated into the light ensure a uniform asymmetrical beam without sharp edges or hotspots and provide a wash of light that, when mounted downward, can provide orientation through spaces, or, when mounted upward, produce a ceiling glow that effectively increases ambient levels within an interior.

A soft yet striking light beam and the steep bevel of the finishing louvre draws attention to the straight vertical back surface which can be finished in various materials according to the designer's preference. kreon side in-line, available in widths of 25, 40 and 80 mm can be merged perfectly into the architecture and combined with other kreon luminaires.

kreon up

kreon up is a range of IP67 rated luminaires characterised by its minimal appearance and optical functionality. The range is offered in three sizes in square or circular, is finished with black or white backed toughened glass with a satin stainless steel trim. LED modules are deep-set within the luminaires and are controlled by a choice of anti-glare louvres for precise uplighting; brightness limiting diffuser for ambient or orientation lighting; wallwash optic for vertical luminance. kreon up 40 is also available as a surface mounted fixed downlight.

kreon up benefits from a stainless steel trim that provides a seamless juncture to minimise integration. The units are sealed to IP67 and have a aluminium and plastic housing to provide protection from the harshest environments. The maritime versions are specially pre-treated for maximum protection against corrosion in salty environments.

kreon up in-line

kreon up in-line is a range of floor recessed uplighters characterised by its minimal appearance and optical functionality. The range, offered in two sizes in both square and circular forms, is finished with black or white backed toughened glass. LED modules are deep-set within the luminaires and are controlled by a choice of anti-glare louvres for precise uplighting, brightness limiting diffusers for ambient or orientation lighting and wallwash optics for vertical luminance.

kreon up in-line benefits from a stainless steel trim that provides a seamless juncture to minimise integration. The units are sealed to IP67 and have a aluminium and plastic housing to provide protection from the harshest environments. The maritime versions are specially pre-treated for maximum protection against corrosion in salty environments.

kreon wabi

kreon wabi is an IP65 external spotlight. This compact luminaire is available with an LED light source, a 30° beam angle and a colour temperature of either 2700K or 3000K. kreon wabi comes as a single based or bollard mounted spotlight or as a fixed wall light.

The spotlight luminaire head can be rotated 360° and tilted up to 90°. The inclination of the luminaire is lockable and can easily be set by using the marks indicated on the fixture. The fixed wall has a asymetrical beam suitable for guiding ilumination.
